

**PORTWEST**®

PEAK PROTECTION

TRADING ETHICALLY AND OPERATING RESPONSIBLY IS A FUNDAMENTAL PART OF OUR BUSINESS STRATEGY

Our main aim is to minimize the impact our operations have on the environment and the natural resources we consume.

Portwest Planet sustainability program is underpinned by 4 strategic pillars: Environment, Labor and Human Rights, Sustainable Procurement and Ethics.

INDEPENDENT PARTNERSHIPS

Portwest products are rigorously tested and certified by accredited test houses and notified bodies including:

PORTWEST PLANET SUSTAINABILITY PROGRAM IS UNDERPINNED BY FOUR STRATEGIC PILLARS.

1. ENVIRONMENT

At Portwest, we are dedicated to increasing the use of sustainable and recycled materials in the manufacturing of our products. Portwest is certified ISO 14001, which means we have worked hard to set up a fully integrated and proactive Environmental Management System. This system enables us to identify the environmental impacts of our business and take action to improve our management and monitoring of risks.

Portwest has achieved Level 3 OEKO-TEX® STeP certification, the highest level possible. We are proud that **85%** of all our garments carry the **OEKO-TEX® STANDARD 100** label, guaranteeing that every component of these products have been tested for harmful substances.

This year we have introduced eco-conscious products, where all fabrics and components are certified as being responsibly sourced and manufactured in a responsible and eco-conscious way.

Across our ranges we also source GRS certified recycled polyester, ensuring visibility of the supply chain. We are a member of Cotton Made in Africa, one of the worlds leading standards for sustainably produced cotton.

As a global manufacturer, replacing our packaging materials with compostable and recyclable components is key to reducing our impact on the environment. We have committed to eliminating single use plastic, and have set a target to have 100% of plastic packaging reusable or compostable by 2025. Additionally, we aim to have 70% of plastic packaging recycled or composted and use 30% recycled content in all packaging by 2025.

2. LABOR AND HUMAN RIGHTS

Portwest is committed to providing a safe and equal workplace for our colleagues globally. By 2023, we aim to have ISO 450001, the Occupational Health and Safety standard, across all our global sites.

In Bangladesh, Portwest's fully owned factory is certified to the Gold WRAP standard. WRAP is the worlds largest, independent, factory based compliance program for responsible production in the sewn product sector.

Our goal is to implement ISO 450001, the Occupational Health and Safety standard, across all of our global sites by 2023.

Portwest's fully owned factories are audited using the Sedex Members Ethical Trade Audit (SMETA). SMETA is a social auditing framework that aims to support business practices across labor standards, universal rights, management systems and health and safety.

3. SUSTAINABLE PROCUREMENT

Portwest has embraced the principles of sustainable procurement, ensuring our purchasing specifications minimize the impact our operations have on the environment and society as a whole. We have built extensive supplier policies and embedded processes to ensure that products are produced in an ethical and responsible manner.

SEDEX, one of the world's leading online platforms, enables companies to manage and improve working conditions in global supply chains. As a member of SEDEX, we are working hard to increase visibility of our global supply chain, and are working closely with suppliers to ensure they are compliant.

4. ETHICS

As a global family-owned company, we are committed to conducting and growing our business in a sustainable and ethical manner.

We have stringent policies in place to ensure the health, wellbeing, and safety of all our employees worldwide. We are voluntary members of independent monitoring organizations who oversee our global compliance with these policies.

We have a comprehensive learning and development program in place and ask for 100% engagement in corporate ethics and anti-corruption and bribery training.

IT security is one of our top priorities, we are determined to protect business information for our suppliers, customers and staff. We follow the CIS20 set of best practice frameworks to achieve this.

PORTWEST[®]

PEAK PROTECTION

For over 118 years we've possessed an unrelenting ambition to produce the world's most trusted and requested protective wear. Through the decades, we have continuously proven our dedication to quality, producing world beating safety garments, foot protection, hand protection and PPE, while pushing the boundaries in protection technologies. Technologies that make the workplace a safer place.

INDUSTRIES

END TO END SAFETY SOLUTIONS

Over the past 100 years, our design experts have developed a deep understanding of the safety needs of workers across many industries. This experience has helped us to develop end to end safety solutions that are designed to meet the needs of each profession within that industry.

CRAFT AND LIGHT INDUSTRY

BUILDING AND CONSTRUCTION

ELECTRONICS AND TELECOMMUNICATIONS

ELECTRICAL UTILITIES

OIL, GAS, ENERGY, MINING, WELDING AND HEAVY INDUSTRY

TRANSPORT, LOGISTICS AND WAREHOUSING

MARINE AND AVIATION

PUBLIC SAFETY

CHEMICAL AND HAZARDOUS MATERIALS

PROTECTION AGAINST HAZARDS

LOW VISIBILITY

Workers in low light and poor visibility conditions, especially those working around moving vehicles, need high visibility garments to ensure maximum visibility. Portwest offers 300+ styles - the most comprehensive range of high visibility garments in the market. The new Glowtex styles now offer triple protection.

142
STYLES

RAIN

Potential workplace hazards can be exacerbated in wet weather. In the rain, surfaces can become slippery and visibility is adversely affected. There is also the risk to worker's health if they are wearing clothing and hand protection that do not protect against the rain.

82
STYLES

EXTREME COLD WEATHER

Extremely cold or wet weather conditions present a serious workplace hazard. Frostbite and hypothermia are real concerns for many industrial workers. Portwest provides workwear and PPE solutions for all climatic conditions.

23
STYLES

HEAT AND FLAME

Workers in the toughest industries regularly encounter heat and flame. Whether it is radiant, convective or conductive heat, serious injuries and even fatalities are caused by heat and flame hazards. Workers deserve the powerful protection offered by Portwest's innovative flame resistant range of products.

66
STYLES

ELECTRIC ARC

An electric arc is a continuous electric discharge of high current between conductors generating very bright light and intensive heat. If a worker is in close proximity to an Arc flash, serious injury and even death can occur.

36
STYLES

CHEMICAL

Industrial workers face dangers posed by chemicals every day. Chemicals present danger in many forms. As liquids, sprays, dry particles or in pressurised form chemicals pose a serious threat. Portwest offers powerful chemical protection solutions across the range.

12
STYLES

EXTREME HOT WEATHER

The harmful effects of the sun seriously compromise workers' health. Heat related fatigue and illness cost employers serious time and money. The Portwest design team have developed innovative cooling products that keep workers cool and protected from extreme heat and sun exposure.

16
STYLES

SLIPPERY SURFACES

From heavy manufacturing to the pharmaceutical sector slips, trips and falls are the most common cause of workplace injury. The provision of slip resistant footwear and safety mats is key to protecting workers from this hazard.

15
STYLES

CUT

Cut injury is one of the most frequent types of accidents reported in working environments. Portwest has a range of garments and hand protection to safeguard against the risk of cuts and lacerations.

39
STYLES

IMPACT

Head, hand or foot, impact is a serious workplace hazard. Portwest's team of experts utilize the latest research in materials technology to offer protective equipment that absorbs the maximum amount of force from impacts.

39
STYLES

NUCLEAR PARTICLE

Radioactive contamination is a real risk for workers in many industries. Garments that help prevent contamination to skin and hair are a must for workers potentially exposed to this type of hazard.

2
STYLES

EYE INJURY

Every day workers across the globe lose valuable working hours or suffer potentially life changing injuries due to eye accidents. Portwest eye protection range offers 50 innovative products that provide powerful optical protection against workplace hazards.

23
STYLES

NOISE LEVELS

Frequent exposure to loud noise is one of the most common work place hazards. Exposure to loud noise can kill the nerve endings in the inner ear and over time the result can be permanent hearing loss that cannot be corrected.

12
STYLES

RESPIRATORY DANGERS

Respiratory protective equipment is used to protect the individual wearer against inhalation of hazardous substances in workplace air. At worst these hazards may cause cancer, lung impairment, diseases, or death.

5
STYLES

EXPERTS IN DESIGN

Our award-winning design and innovation team of over 40 designers and product managers deliver inspiring and contemporary designs that offer optimum protection that meet the everyday needs of the wearer.

INNOVATION IS IN OUR DNA

Continuous innovation ensures our protective wear meets the ever evolving demands of workers across multiple industries.

Our development includes the most advanced fabrics and trims, uncompromising durability, increased certification, smart components and enhanced protective features to ensure wearer safety and enhanced job performance.

ALWAYS PUSHING BOUNDARIES

CUSTOM

YOUR IMAGE,
OUR EXPERTISE

There are times when your requirements are so unique that only the professionals with over a century's worth of design experience can help. **Portwest Custom** is the solution, an end-to-end design service for bespoke safety products. Working hand in hand with customers, each year we get to create thousands of bespoke products for a variety of industries around the world.

LET OUR EXPERTS JOIN YOUR TEAM

DESIGN EXPERTS:

- Our designers are the best in the business and true experts in their craft
- They can tailor existing products or design fully bespoke collections depending on each customer's requirements and budget
- All designers can provide a technical review of existing designs or a full technical specification development service

PRODUCTION EXPERTS:

- Portwest factories have dedicated production lines for bespoke orders which gives us greater capacity and full control on lead times
- Dedicated sample rooms enable us to quickly produce product samples
- We take responsible and ethical production seriously. Our factories are WRAP certified, and we are members of Sedex and OEKO-TEX®.

QUALITY EXPERTS:

- Every bespoke product is rigorously tested in-house and subsequently certified by accredited test houses and notified bodies.
- Unrivalled sourcing capability with access to quality assured, ethical, accredited fabrics, materials and trims

PROJECT EXPERTS:

- Our team of experienced Project Managers will be your key point of contact throughout the project
- They will proactively keep you informed on progress from concept to order delivery

DESIGNED / SAMPLED / CERTIFIED
PRODUCED AND DELIVERED

FABRICS

Our fabrics need to work hard. They need to protect and be comfortable, stretch and be durable, perform and be skin friendly. Great care and consideration is given to the selection of each and every fabric that is used across the entire range.

MODAFLAME®

Modacrylic fibers provide inherent flame resistance, excellent dimensional stability and high elastic properties which allow garments to retain their shape. High cotton content gives the fabric comfort, warmth and a soft handle. Carbon fiber woven into the fabric gives inherent anti-static properties.

PORTFLAME®

This inherently flame resistant Portflame Plus™ fabric offers luxurious comfort and is ideal for hot climates. The special viscose blend provides outstanding ARC protection rarely achieved on lightweight fabrics. Constructed using 50% Viscose, 30% Modacrylic, 18% Aramid, 2% Anti-Static, Portflame Plus™ is available in 5.5oz.

BIZFLAME®

Bizflame® is a proprietary flame resistant finish which, when applied to fabric, gives excellent flame resistance. The carbon fiber yarns make the garments antistatic.

BIZWELD®

BizWeld is a flame-resistant, cotton fabric, globally available and engineered for maximum performance, comfort and durability. This high-technology fabric is used with confidence by thousands of workers in the welding industry and allied industries.

Kingsmill fabrics have been constructed to a high specification and is the ideal choice for your workwear needs. They have excellent dye retention, tensile and tear strength and a high pilling resistance. Garments made from a Kingsmill fabric have a UPF rating of over 40+ so will block 98% of the UV rays which fall on the garment.

Made with 300 Denier Oxford Weave 100% Polyester yarn, this 190g fabric has superb abrasion and tear resistance. The double coating of polyurethane (PU) makes the fabric highly durable and waterproof. And the outer has a water and stain repellent finish. Available in 300D Breathable and 300D Industry (non-breathable).

Made with 150 Denier Oxford Weave 100% Polyester yarn, this 150D fabric is abrasion and tear resistance. The PVC coating makes the fabric durable and waterproof and has a water repellent finish.

Made with 190T plain weave 100% polyester yarn, this fabric is strong and rugged with great abrasion resistance. The PVC coating makes the fabric waterproof and the water repellent finish increases the water resistance.

Cotton Comfort fabric is manufactured from a 55% cotton, 45% polyester fabric with cotton on the inside for comfort and polyester on the outside for maximum durability. The cotton/polyester mix ensures that the fabric is highly breathable and that a comfortable temperature is maintained at all times.

The high visibility MeshAir fabric is lightweight and fully breathable making it ideal for working in warmer conditions. The open mesh fabric uses an advanced open knit construction which provides full airflow around the body and excellent ventilation. The MeshAir high visibility fabric is fully tested and certified to EN20471.

This durable, stretchable fabric is tear resistant, anti-fungal, oil, fat, diesel and grease resistant and can be easily wiped clean. All garments are finished with high frequency welded seams ensuring maximum water-resistance.

Portwest Extreme is a premium high performance, breathable rainwear fabric constructed from 100% Polyester, 300D Stretch Oxford 60z and offers superior comfort, function and endurance in all weather conditions. Waterproof and wind proof to the highest standards, this fabric far exceeds the current highest industry requirements.

TESTING

GLOBAL CERTIFICATION

As a global manufacturer of protective wear, Portwest products are rigorously and independently tested to international standards and certified by accredited test houses and notified bodies across the world.

Certified to **ANSI** (American National Standards Institute) means that our products have been tested and certified by a third party testing facility to meet all the requirements of that relevant ANSI standard. Product categories that are tested include high visibility, hand protection and PPE. Our flame resistant garments and PPE, where applicable, are also tested and certified to **NFPA** (National Fire Protection Association) standards, which cover fire, electrical and related hazards. **ASTM** (American Society for Testing and Materials) test products for safety and our flame resistant garments and foot protection are tested and certified where applicable.

In addition, many of our products also carry the internationally recognized **CE marking**, meaning they conform with European health, safety, and environmental protection standards.

MADE FOR WOMEN

FIT FOR PURPOSE

When creating protective wear for women, our designers are focused on reducing risk and increasing comfort, allowing workers to do their job unhindered. Garments are designed in line with average women's measurements such as height and arm length, thus reducing the risk of tripping and snagging or machinery entrapment. Additional tailoring around the waist and hips ensures maximum comfort over long periods of time.

FEATURES

MARKET LEADING COMPONENTS AND DESIGN FEATURES

The latest research and technology, coupled with premium fabrics and components ensure complete worker protection.

As industry demands evolve we continue to innovate. Our HiVisTex Pro retroreflective tape can withstand 50+ washes. ID card holders feature on both garments and head protection to allow for quick identification. Stretch and reinforced panels allow ease of movement with added durability. Sealed and welded seams keep you dry in all weather. Adjustable hems, elasticated cuffs, and innovative wire lace fastening systems all ensure a safe fit.

PERFORMANCE WORKWEAR

Portwest PW3™ contemporary workwear blends sports and lifestyle trends with function, a modern fit and improved comfort.

Utilizing premium fabrics, products are engineered for flexibility across a diverse range of industry and trades and offer exceptional value.

Made with 300 Denier 100% Polyester yarn, this is a tough fabric for tough conditions. 300D 5.5oz fabric has superb abrasion and tear resistance. The polyurethane (PU) coating on the inside makes the fabric durable and waterproof and the outer has a water and stain repellent coating which helps keep the garment clean. 300D Oxford Weave is available with both a breathable (300D Breathable) and non-breathable (300D Industry) Polyurethane coating.

Portwest's innovative two-way Kingsmill™ Polycotton Flex fabric is constructed from 65% polyester, 33% cotton and 2% elastane. This premium workwear fabric offers excellent abrasion and tear-resistant properties whilst the mechanical stretch function ensures full ease of movement for the wearer. A UPF rating of 40+ on this fabric blocks 98% of the UV rays.

Portwest Extreme is a premium high performance, breathable rainwear fabric constructed from 100% Polyester, 300D Stretch Oxford 6oz and offers superior comfort, function and endurance in all weather conditions. Waterproof and wind proof to the highest standards, this fabric far exceeds the current highest industry requirements.

HiVisTex™ Pro retroreflective tape offers excellent freedom of movement due to its segmented construction. Lightweight and flexible this high performance heat applied tape has thousands of glass beads per inch squared which work like thousands of tiny mirrors reflecting light back towards its source.

Texpel™ SOS, Splash, Oil and Stain is a premium fabric finish which repels oil and liquids, causing them to bead up and roll off the fabric surface. The finish also helps release stains in the washing process, keeping garments looking cleaner for longer.

IONA™ **PLUS**

ENHANCED PERFORMANCE WORKWEAR

Iona™ Plus is the latest evolution of performance workwear to deliver maximum performance, comfort and functionality.

Products are designed to offer enhanced user visibility with lightweight flexible HiVisTex™ Pro segmented reflective tape and contrast fluorescent trim. A selection of complementary designs and advanced construction techniques have been used, guaranteeing flexibility and ultimate wearer durability.

Made with 300 Denier 100% Polyester yarn, this is a tough fabric for tough conditions. 300D 5.5oz fabric has superb abrasion and tear resistance. The polyurethane (PU) coating on the inside makes the fabric durable and waterproof and the outer has a water and stain repellent coating which helps keep the garment clean. 300D Oxford Weave is available with both a breathable (300D Breathable) and non-breathable (300D Industry) Polyurethane coating.

The high visibility MeshAir fabric is lightweight and fully breathable making it ideal for working in warmer conditions. The open mesh fabric uses an advanced open knit construction which provides full airflow around the body and excellent ventilation. The MeshAir high visibility fabric is fully tested and certified to EN20471.

Texpel™ Wicking is a premium fabric finish which wicks moisture away from the skin to keep you fresh and comfortable. Offering powerful protection from stains, the fabric blocks bad odors and provides enhanced breathability.

HiVisTex™ Pro retro reflective tape with contrast fluorescent trim offers excellent freedom of movement due to its segmented construction. Lightweight and flexible this high performance heat applied tape has thousands of glass beads per inch squared which work like thousands of tiny mirrors reflecting light back towards its source.

ACTIVE STREET WORKWEAR

Portwest KX3™ is a superior line of trend-led apparel combining quality construction to the highest standards and technical fabrics.

Key characteristics within this collection include abrasion resistance, moisture management and stretch fabrics for sustained agility and effortless movement. All KX3 garments have been designed to fully complement each other to allow a personal layering system to be built. A perfect solution for modern workwear.

Portwest's innovative two way Kingsmill™ Polycotton Flex fabric is constructed from 65% polyester, 35% cotton. This premium workwear fabric offers excellent abrasion and tear resistant properties whilst the mechanical stretch function ensures full ease of movement for the wearer. A UPF rating of 50+ on this fabric blocks 98% of the UV rays.

Kingsmill™ Cotton Flex is a premium cotton stretch fabric. A blend of 98% cotton and 2% elastane provides the ultimate in comfort and flexibility. The high cotton content gives an ultra soft handle, and the added elastane delivers ease of movement. The long staple fibers used in the construction process provide strength, excellent pilling resistance and a superior finish. This fabric has a UPF rating of 50+ to block 98% of UV rays.

INDUSTRY LEADING FABRICS

This extensive range of high visibility apparel meets the stringent requirements in both design and construction, to ensure compliance with the latest ANSI/ISEA 107 high visibility standard. At Portwest, every roll of tape and fabric are tested to ensure they meet and exceed the ANSI/ISEA standard requirements.

Portwest Extreme is a premium high performance, breathable rainwear fabric constructed from 100% Polyester, 300D Stretch Oxford 6oz and offers superior comfort, function and endurance in all weather conditions. Waterproof and wind proof to the highest standards, this fabric far exceeds the current highest industry requirements.

Made with 300 Denier Oxford Weave 100% Polyester yarn, this 190g fabric has superb abrasion and tear resistance. The double coating of polyurethane (PU) makes the fabric highly durable and waterproof. And the outer has a water and stain repellent finish. Available in 300D Breathable and 300D Industry (non-breathable).

Made with 150 Denier Oxford Weave 100% Polyester yarn, this 150D fabric is abrasion and tear resistant. The PVC coating makes the fabric durable and waterproof and has a water repellent finish.

Made with 190T plain weave 100% polyester yarn, this fabric is strong and rugged with great abrasion resistance. The PVC coating makes the fabric waterproof and the water repellent finish increases the water resistance.

Sealtex™ Ultra is a highly breathable, high technology, PU coated fabric bonded to a flexible 100% polyester tricot knit. This 5.5oz waterproof, windproof, and breathable fabric will keep you warm and dry in adverse weather conditions. Welded, waterproof seams keep rain and wind out while the durable, anti-fungal, anti-tear, flexible fabric can easily be wiped clean, allowing these garments to look great while lasting longer.

Cotton Comfort fabric is manufactured from a 55% cotton, 45% polyester fabric with cotton on the inside for comfort and polyester on the outside for maximum durability. The cotton/polyester mix ensures that the fabric is highly breathable and that a comfortable temperature is maintained at all times.

The high visibility MeshAir fabric is lightweight and fully breathable making it ideal for working in warmer conditions. The open mesh fabric uses an advanced open knit construction which provides full airflow around the body and excellent ventilation. The MeshAir high visibility fabric is fully tested and certified to EN20471.

HIGH VISIBILITY TESTED TO EXCEED STANDARDS

Can you be sure your garment conforms to ANSI/ISEA 107?

A certificate from a test house guarantees that the garment or fabric sent to the test house has attained a standard. It is not a guarantee that bulk production meets the standard.

However, in our factories, we test every roll of fabric and retroreflective tape with highly specialized equipment to guarantee that all production meets the ANSI/ISEA 107 standard, not just the garment that was sent to the test house.

ANSI/ISEA 107 states the retroreflectometer reading should not be below 330 (cd/lx.m²) however we insist on a reading of 400 (cd/lx.m²) plus.

Fabric Testing

In our quality control laboratory, we use a Minolta Spectrophotometer to check every roll of fabric. This guarantees the fabric we use is fully compliant with the ANSI/ISEA 107 standard.

RETRO REFLECTIVE TAPE

HiVisTex™ PRO

HiVisTex™

Our brands include HiVisTex tape and HiVisTex Pro segmented tape. The spaces in HiVisTex Pro segmented tape allow for increased breathability and is much more flexible, allowing stretch fabrics to move with the wearer.

Manufactured using premium glass bead technology that surpasses all standards in terms of manufacturing quality, washability, wear resistance and durability.

Reflective properties that last 50 domestic washes

The minimum requirement for washability under ANSI/ISEA 107 is 5 washes.

We know that many hi-vis tapes lose their reflective properties after 25 washes and some tapes last just the required 5 washes. With a Portwest high visibility garment, you can be certain our HiVisTex retroreflective tape will last through 50 washes ensuring ultimate visibility in low light conditions wash after wash*.

*Washing instructions on the garment label must be adhered to.

HIGH VISIBILITY SAFETY APPAREL

Our High Visibility range is fully certified and tested to the ANSI/ISEA 107 standard, ideal for those who will not compromise on style, comfort, protection and performance. These garments are designed to keep you warm, dry and visible in all conditions.

HIGH VISIBILITY GARMENT TYPES are designated by the work environment in which the wearer is performing a task.

There are 3 types as shown on the table below – **TYPE O, TYPE R AND TYPE P.**

PERFORMANCE CLASSES provide a range of design options corresponding with the needs of the user in the expected risk environment.

ANSI
TYPE O
CLASS 1

CLASS 1 (TYPE O) is worn in non-complex work areas in which vehicles will not be moving at roadway speeds.

ANSI
TYPE R
CLASS 2

ANSI
TYPE P
CLASS 2

CLASS 2 (TYPE R OR P) uses more high visibility material than Class 1 which allows the HVSA to define the human more effectively.

ANSI
TYPE R
CLASS 3

ANSI
TYPE P
CLASS 3

CLASS 3 (TYPE R OR P) can offer greater visibility to the wearer in both complex backgrounds and through a full range of body movements by mandatory placement of background material and reflective tape on sleeves, legs etc.

ANSI
CLASS E

CLASS E SUPPLEMENTAL Items such as pants, overalls, shorts and gaiters shall not be worn alone to meet HVSA PPE requirements. When a Class E item is worn with Performance Class 2 or Class 3, the overall classification shall be Performance Class 3.

CLASS IDENTIFIER ICONS

These symbols indicate that the garment is tested and is compliant with ANSI/ISEA -107, the American National Standard for High Visibility Safety Apparel and Headwear. Each symbol denotes the garment type and the performance class associated with each garment.

ANSI
TYPE O
CLASS 1

ANSI
TYPE R
CLASS 2

ANSI
TYPE P
CLASS 3

ANSI
CLASS E

HIGH VISIBILITY SAFETY APPAREL

Examples:

TYPE R CLASS 3
Must incorporate a minimum of 1240 in² of background material and 310 in² of retroreflective materials.

URT30

TYPE R CLASS 2
Must incorporate a minimum of 775 in² of background material and 201 in² of retroreflective materials.

US380

TYPE O CLASS 1
Must incorporate a minimum of 217 in² of background material and 155 in² of retroreflective materials.

S479

CLASS E SUPPLEMENTAL
Must incorporate a minimum of 465 in² of background material and 109 in² of retroreflective materials.

E043

Table 1. Minimum Areas of Visible Materials

Garment Type	Performance Class	Background Material	Retroreflective or Combined-Performance Materials	Minimum Width Reflective Material
Type O Off-road and Non-Roadway Use	Class 1	217in ² (0.14m ²)	155in ² (0.10m ²)	1in. (25mm)
Type R Roadway and Temporary Traffic Control Zones	Class 2*	775in ² (0.50m ²)	201in ² (0.13m ²)	1in. (25mm) 1.38in. (35mm)
	Class 3**	1240in ² (0.80m ²)	310in ² (0.20m ²)	1in. (25mm) 2in. (50mm)
Type P Emergency and Incident Responders and Law Enforcement Personnel	Class 2	450in ² (0.29m ²)	201in ² (0.13m ²)	1in. (25mm) 2in. (50mm)
	Class 3	775in ² (0.50m ²)	310in ² (0.20m ²)	1in. (25mm) 2in. (50mm)
Supplemental Items	Class E	465in ² (0.30m ²)	109in ² (0.07m ²)	1in. (25mm) 2in. (50mm)

*For the smallest size in Type R, Class 2, a minimum of 0.35 m² (540 in²) of background material may be used to accommodate small-sized workers. All subsequent larger sizes must use 0.50 m² (775 in²).

**For the smallest size in Type R, Class 3, a minimum of 0.65 m² (1000 in²) of background material may be used to accommodate small-sized workers. All subsequent larger sizes must use 0.80 m² (1240 in²).

EN 343

EN343 is the European standard that applies to garments worn in adverse weather conditions. This standard specifies requirements and test methods applicable to the materials and seams of protective clothing against the influence of precipitation (e.g. rain, snowflakes), fog and ground humidity.

EN 342

EN342 is the European standard that applies to garments worn in cold environments. This standard specifies requirements and test methods for the performance of clothing ensembles (i.e two-piece suits/coveralls) for protection against the effects of cold environments equal to or below -5°C (23°F).

MAKING OUR GARMENTS WATERPROOF

Waterproofing our fabric

STEP 1

Preventing water penetration by one of two methods; applying a durable water repellent membrane or a double coating of polyurethane (PU). Both methods ensure the garment is waterproof and breathable.

WATERPROOF MEMBRANE

Portwest Extreme™ uses a waterproof and breathable membrane, a durable water repellent (DWR) finish on face fabric and a breathable backing fabric. These combined technologies allow moisture to escape, while preventing water penetration.

DOUBLE PU COATING

Our 300D fabrics use a double coating of polyurethane (PU) for guaranteed waterproofness. Our application process creates microscopic holes which let perspiration out but doesn't allow water droplets in.

STEP 2

We apply our fabric finish, Durable Water Repellent (DWR), which ensures the water rolls up and beads off the fabric, avoiding water build up.

WATER REPELLENT FINISH

Texpel™ SOS, Splash, Oil and Stain is a premium fabric finish which repels oil and liquids, causing them to bead up and roll off the fabric surface. Texpel™ Splash is an extremely water resistant fabric finish.

Adding comfort and performance

STEP 3

Sealing or welding the seams is required to create a fully waterproof garment.

SEALED OR WELDED SEAMS

Sealed Seams:

A seal tape is applied to a seam on the inside, to stop water entering through the stitching.

Welded Seams:

A stitched seam is made using high frequency welding techniques to make it watertight.

STEP 4

Our designers add feature enhancements to the garments for maximum comfort and functional performance.

ENHANCED FEATURES

- Specially engineered watertight pockets
- Durable waterproof zippers
- Adjustable openings to facilitate ventilation
- Double stormflap for protection against driving wind and rain
- Engineered hood, hems and sleeve cuffs to ensure precise fit and keep the water out

A close-up photograph of a green jacket, likely made of a technical fabric. The jacket is covered in numerous small droplets of condensation, particularly on the upper right side. A dark blue or black seam is visible, running diagonally across the upper portion of the frame. The lighting is bright, highlighting the texture of the fabric and the individual water droplets.

WATERPROOFING
AND
BREATHABILITY
NUMBERS

**WHAT
DO THEY
REALLY
MEAN?**

MM WATER RESISTANT LEVEL

Waterproof
5,000mm

The minimum rating for a jacket to be called rainproof, suitable for working in occasional light to moderate rain.

Very Waterproof
10,000 - 15,000mm

Will withstand moderate to heavy rain but may soak through if subjected to pressure such as kneeling in very wet conditions.

Highly Waterproof
Above 20,000mm

Suitable for those working outdoors in extreme weather conditions, wind and heavy rain.

Water Resistant Level

MVP BREATHABILITY LEVEL

Low Breathability
3,000 - 10,000
G/M²/24hrs

Suitable for tasks where light physical activity causes minimal perspiration.

Medium Breathability
10,000 - 20,000
G/M²/24hrs

Suitable for moderate to high level of physical work where breathability of rainwear is necessary to maintain a comfortable body temperature.

High Breathability
Above 20,000
G/M²/24hrs

Suitable for a high level of physical work. Perspiring heavily will require rainwear this breathable.

Breathability Level

THE MOST ADVANCED COMPLETE GARMENT TEST

EN 343

EN 343 PROTECTIVE CLOTHING, PROTECTION AGAINST RAIN

This European standard specifies requirements and test methods applicable to readymade garments, materials and seams of protective clothing against the influence of precipitation e.g. rain, snowflakes, fog and ground humidity.

The standard provides 2 performance parameters and an optional test:

- Water penetration resistance (4 levels)
 1. Minimum level of rain protection
 2. Intermediate rain protection
 3. Very good rain protection
 4. Highest level of rain protection
- Breathability (4 levels)
 1. Not classed as breathable under EN 343
 2. Intermediate breathability
 3. Very good breathability
 4. Highest level of breathability
- Optional readymade garment rain tower test (R)

READYMADE GARMENT RAIN TOWER TEST

EN 14360 PROTECTIVE CLOTHING - TEST METHOD FOR READYMADE GARMENTS

Impact from above with high energy droplets.

Garments are placed over data sensitive recording manikins and exposed to rainfall simulation of 450 liters/m²/h for a minimum of one hour.

TESTED TO PERFORM IN EXTREME COLD

EN 342

EN 342 STANDARD AND THERMAL MANIKIN TESTING

We test our garments to ensure workers are protected in the extreme cold.

The principal test in EN 342:2017 uses a heated manikin. During the test, the manikin is heated to and maintained at a specified temperature. Thermal insulation is determined from the power required to maintain the manikin surface at this constant temperature. The resulting effective insulation value is used to classify the performance of the garment.

It can also be used to estimate the maximum duration of wear based on the activity level of the wearer, the temperature of the environment and the insulation value of the clothing. Clothing claiming to meet the requirements of EN 342 must be marked with the pictogram shown below.

VESTS

New additions to our extensive selection of vests include a contrast tape X BACK vest, more colorways in our executive vests and enhanced visibility vests, and the introduction of an eco-conscious vest. This section also includes full mesh, breakaway, public safety and flame resistant vests.

Our high visibility MeshAir is an advanced open knit fabric construction which provides full airflow around the body and excellent ventilation. It is lightweight and fully breathable, making it ideal for working in warmer conditions.

This section contains over 40 styles and features CLASS 3, CLASS 2, CLASS 1 and NON ANSI apparel. New additions include; X BACK, eco-conscious and women's apparel.

Cotton Comfort 55% Cotton, 45% Polyester
Cotton Comfort fabric is manufactured from a 55% cotton, 45% polyester 175g fabric with cotton on the inside for comfort and polyester on the outside for maximum durability.

100% Polyester, Bird Eye Knit

Texpel™ Wicking is a premium fabric finish which wicks moisture away from the skin to keep you fresh and comfortable. Offering powerful protection from stains, the fabric blocks bad odors and provides enhanced breathability.

100% Polyester Mesh

The Portwest high visibility MeshAir fabric is lightweight and fully breathable making it ideal for working in warmer conditions. The open mesh fabric uses an advanced open knit construction which provides full airflow around the body and excellent ventilation.

Splash, Oil + Stain

Texpel™ is a durable, stain repellent finish which protects against everyday spills without changing the feel or comfort of the fabric. The finish is highly breathable.

- ✓ Helps protect fabric from oil and grease
- ✓ Drives away dirt and grime
- ✓ Aids the release of stubborn stains when washing
- ✓ Helps retain fabric softness

OUTERWEAR

A complete selection of jackets including multi-seasonal, breathable, winter, traffic, bomber, XBACK, eco-conscious, public safety, and women's jackets, in addition to high performance rain jackets and pants.

Portwest Extreme™ is a premium high performance rainwear fabric constructed from 100% Polyester, 300D Stretch Oxford 200g and offers superior comfort, function and endurance in all weather conditions. Waterproof, breathable and windproof to the highest standards, this fabric far exceeds the requirements of EN 343 Class 4:4.

300D
OXFORD
WEAVE

Made with 300 Denier 100% polyester yarn, this is a tough fabric for tough conditions. 300D fabric has superb abrasion and tear resistance.

The double polyurethane (PU) coating on the inside of our fabric makes it durable and waterproof.

The outer has a water and stain repellent coating which helps keep the garment clean.

MARKET LEADING FABRICS

This industry leading flame resistant range provides multi-standard protection for hazardous environments. These state of the art products are the result of years of experience combined with advanced technology and market research. Commitment to the health, safety and comfort of the wearer can be seen in the wide range of products suitable for all climates and end uses.

This inherently lightweight flame resistant Portflame Plus™ fabric offers luxurious comfort and is ideal for hot climates. Constructed using 50% Viscose, 30% Modacrylic, 18% Aramid, 2% Anti-Static, Portflame Plus™ is available in 5.5oz.

Modafume® is an inherently permanent flame resistant fabric. This special blend combines 60% modacrylic fiber with 39% cotton and 1% carbon fiber. Modafume is extremely comfortable, hardwearing and offers full anti-static protection.

Bizflame® is a proprietary flame resistant finish which, when applied to fabric, gives excellent flame resistance. The carbon fiber yarns make the garments antistatic.

Bizweld® 100% cotton 9.5oz fabric is completely flame resistant. All Bizweld garments offer excellent flame and molten splash protection for welding, foundries and allied industries.

Sealtex® Flame is constructed from a flame resistant, PU coated, polyester fabric 7.5oz. The lightweight and durable Sealtex Flame is designed to offer full protection against adverse weather conditions and flame hazards.

FLAME RESISTANT - USA Standards

NFPA
2112

NFPA® 2112

This standard specifies the minimum performance requirements and test methods for flame resistant fabric and components and the design and certification requirements for garments for use in areas at risk from flash fires. Flame resistant fabrics must pass a comprehensive list of thermal tests, including the following:

•**ASTM F2700** – Heat Transfer Performance (HTP) Test
This test is a measure of the unsteady state heat transfer properties of garment materials.

•**ASTM D6413** – Vertical Flammability (Flame Resistance) Test
This test is used to determine how easily fabrics ignite and continue to burn once ignited.

•**Thermal Shrinkage Resistance Test**
This test measures a fabrics resistance to shrinkage when exposed to heat.

•**Heat Resistance Test**
This test measures how fabrics and components react to the high heat that could occur during a flash fire.

•**ASTM F1930-11** – Thermal Manikin Test
This test provides an overall evaluation of how the fabric performs in a standardized overall design after three-second thermal exposure.

•**FTMS 191A** – Thread melting resistance Test
Thread used in flame resistant garments must withstand temperatures of up to 500°F.

NFPA
70E

NFPA® 70E

This standard addresses electrical safety-related work practices for employee workplaces and requires employees working on or near energized parts and equipment to wear flame resistant clothing that meets the requirements of ASTM F1506.

The NFPA 70E standard gives guidance for selecting the appropriate PPE according to the level of risk involved in a particular job. Risk areas are categorized by the

expected level of incident energy in the event of an electric arc. There are four categories, ARC 1 (which is low risk) through 4 (which is high risk and requires FR clothing with a minimum ARC rating of 40cal/cm²). The higher the ARC rating value, the greater the protection.

PPE Category	Clothing description	Required minimum Arc rating of PPE/ cal/cm ²
 ARC	CAT/ARC 1: Arc rated FR Shirt and FR Pants or FR Coverall	4
 ARC	CAT/ARC 2: Arc rated FR Shirt and FR Pants or FR Coverall	8
 ARC	CAT/ARC 3: Arc rated FR Shirt and FR Pants or FR Coverall, and Arc flash suit selected so that the system Arc rating meets the required minimum	25
 ARC	CAT/ARC 4: Arc rated FR Shirt and FR Pants or FR Coverall and Arc flash suit selected so that the system Arc rating meets the required minimum	40

ASTM® F1506

This performance specification covers the flame resistance of textile materials to be used for wearing apparel for use by electrical workers exposed to momentary electric arc and related hazards.

These textile materials must meet the following performance requirements:

- A general requirement that thread and components used in garment

construction shall not contribute to the severity of injuries to the wearer in the event of a momentary electric arc and related thermal exposure.

- A set of minimum performance specifications for knit and woven fabrics including strength, colorfastness, flame resistance before and after washing and arc test results.

- Testing for flame resistance in accordance with ASTM test method D6413 vertical flame test.

- When tested as received in accordance with ASTM test method F1959 arc performance, the fabric may not have more than 5.0 seconds after flame time when tested.

Garments must be labeled with the following: - Tracking code. - Statement that the garments meet the requirements of F1506. - Manufacturer's name, size information.

- Care instructions and fiber content.

- ARC rating (ATPV) or (EBT).

ASTM® F1959/F1959M-12: 2013

Standard Test Method for Determining the ARC Rating of Materials for Clothing

FABRIC ONLY TEST. This test method is the same as outlined under EN 61482-1-1. Pre treatment may vary.

Laundering of FR Fabrics

The Flame Resistant finish is retained for the normal life cycle of the garment provided that the care instructions are adhered to.

Washing / Drying Procedure:

Pretreatment: If stains are difficult to remove, they can be treated before putting into the washing machine with a liquid detergent applied directly to stains and lightly rubbed. Heavier and stubborn stains should be pretreated with a commercial stain removal product at the earliest opportunity and sufficient time allowed for the pretreatment to penetrate and loosen the stain. Never use chlorine bleach or washing detergents containing bleach as these will reduce the flame resistance properties of the fabric. Fabric softeners, starches and other laundry additives are not recommended as they can mask the flame resistance performance and may also act as a fuel in case of combustion.

Washing: Always wash contaminated workwear separately, do not mix with non workwear. Flame Resistant fabric can usually be washed at high temperatures however it is the components (ie. the reflective tape, badging, etc.) on a finished garment that dictates the maximum washing temperature that the garment can be washed at. Always follow the washing temperature on the garment label. Always wash and dry garments inside out to minimize surface abrasion and help maintain the surface appearance of the fabric. Zippers should be closed during washing.

Load Size: To ensure a more efficient, cleaner wash, avoid overloading the machine so the garments can move freely through the wash and rinse cycles.

Drying: Tumble drying is not usually recommended as the temperature used is often too high and can cause garment shrinkage. It is vital that cotton or cotton mix garments are not over dried. Over drying is the main cause of excessive garment shrinkage. Do not hang in direct sunlight. This can cause fading.

FLAME RESISTANT - European Standards

IEC 61482-2:2018 / EN 61482-2:2020

Protective Clothing Against the Thermal Hazards of an Electric Arc

The new updated version of IEC 61482-2:2018 has a new symbol, replacing the 2009 symbol.

During a transition period, stock garments will have mixed symbols

IEC 61482-2:2018
ELIM 6.4 cal/cm²
APC 1

IEC 61482-2:2018
CLASS 1
IEC 61482-1-1:
2009 Method A
ATPV 8.4 cal/cm²

This standard specifies requirements and test methods applicable to materials and garments for protective clothing against the thermal effects of an electric arc event. An electric arc is a continuous electric discharge of high current between conductors generating very bright light and intensive heat.

Two international test methods have been developed to provide information on the resistance of clothing to the thermal effects of electric arcs. Each method gives different information. To comply with the standard

either or both tests must be carried out.

Open Arc Method IEC 61482-1-1.

This test method aims to establish the ELIM (Incident Energy Limit) ATPV (Arc Thermal Performance Value) or EBT (Energy Breakopen Threshold) of a fabric. ELIM is a new value that was added to the updated version of IEC 61482-1-1, the Open Arc test method. This value (cal/cm²) is the highest incident thermal energy to which the garment can be exposed with a 0% risk of the wearer getting a second-degree burn injury. The ELIM rating usually has a lower calorific value than ATPV and EBT. ATPV and EBT are measured against a 50% risk of the wearer getting a second-degree burn injury. An ATPV value or an EBT value is determined by how the fabric reacts to the arc test. If a hole appears first, the value is set as EBT and if high heat passage is first, it will be ATPV. Both ATPV and EBT are also expressed in calories per cm². The higher the calorific value of the garment or fabric, then the greater the protection for the wearer. The Stoll Curve is used in testing along with a graph of

heat flux exposure times. The point at which the heat flux cross the Stoll Curve is identified as the point at which a human would feel pain and be at risk of second-degree burns.

Box Test Method IEC 61482-1-2

During this test, fabric or garments are exposed to an electric arc, stimulating typical exposure conditions for a short circuit current, confined in a box for 0.5 seconds, resulting in either an APC 1 or APC 2 classification.

APC 1 and APC 2 (APC = Arc Protection Class) will replace Class 1 and Class 2 in the updated IEC 61482-1-2, Box test method. The values remain the same ie. APC 1 (formerly Class 1) is to a current of 4kA (400V, 168Kj) and APC 2 (formerly Class 2) is to a current of 7kA (400V, 320Kj)

Garments can be layered to achieve an overall ELIM, ATPV or EBT Rating. For example, a thermal layer may achieve an EBT of 4.3 Cal/m², and an outer coverall may achieve an ELIM of 13.6 Cal/cm².

However, the combination EBT/ELIM ratings will be greater than the sum of the two single layers, as the air gap between the two layers affords the wearer additional protection.

ASTM F1959/F1959M-14 FABRIC ONLY TEST. This US Test Method determines the Arc Rating (ATPV or EBT) of a fabric or a multi-layer combination of fabrics. The test method is similar to IEC 61482-1-1. Pre-treatment may vary.

ARC RATED PPE	REQUIRED MINIMUM ARC RATING OF PPE/ CAL/CM ²
	4 CAL/CM ²
	8 CAL/CM ²
	25 CAL/CM ²

EN ISO 11612: 2015

The performance requirements set out in this international standard are applicable to garments which could be worn for a wide range of end uses, where there is a need for clothing with limited flame spread properties and where the user can be exposed to radiant or convective or contact heat or molten metal splashes.

This test uses standard methods and conditions to predict the performance of fabric/garments in the event of contact

with heat or flames. Garment features such as seams, closures and logos must be tested as well as the fabric. Tests must be carried out on pre-treated components according to the manufacturers care label.

Specific testing is listed below:

- Dimensional change
- Limited flame spread (A1+A2)*
- Convective heat (B) - 3 levels
- Radiant heat (C) - 4 levels

- Molten aluminum splash (D) - 3 levels
- Molten iron splash (E) - 3 levels
- Contact heat (F) - 3 levels (temperature 250°C)
- Heat resistance at a temperature of 180°C.
- Tensile strength (must meet a minimum of 300N) Tear strength (must meet a minimum of 10N)
- Bursting strength
- Seam strength

Garment design requires that coverage must be provided from the neck to the wrists and to the ankles. Optional testing includes water vapor resistance and manikin testing for overall burn prediction.

*This test must be carried out on fabric and seams.

EN ISO 11611: 2015

This international standard specifies minimum basic safety requirements and test methods for protective clothing for use in welding and allied processes (excluding hand protection).

The international standard specifies

two classes with specific performance requirements.

Class 1 is protection against less hazardous welding techniques and situations, causing lower levels of spatter and radiant heat.

Class 2 is protection against more hazardous

welding techniques and situations, causing higher levels of spatter and radiant heat.

Specific testing is listed below:

- Tensile strength
- Tear strength
- Bursting strength

- Seam strength
- Dimensional change
- Requirements of leather
- Limited flame spread (A1 + A2)
- Molten droplets
- Heat transfer (radiation)
- Electrical resistance

EN 1149: 2018

Protective Clothing - Electrostatic Properties - Part 5. Material Performance and Design Requirements.

This European standard is part of a series of standards for test methods and requirements for electrostatic properties of protective clothing. The standard specifies material and design requirements for garments used as part of a total earthed system, to avoid incendiary discharges. The requirements may not be sufficient in

oxygen enriched flammable atmospheres. This standard is not applicable for protection against mains voltages.

EN 1149 consists of the following parts

- EN 1149-1: Test method for measurement of surface resistivity.
- EN 1149-2: Test method for measurement

of the electrical resistance through a material (vertical resistance)

EN 1149-3: Test methods for measurement of charge decay

EN 1149-4: Garment Test (under development)

EN 1149-5: Material performance and design requirements.

Electrostatic dissipative protective clothing shall be able to permanently cover all non-complying materials during normal use. Conductive parts (zippers, buttons etc) are permitted provided they are covered by the outermost material when in use.

ATEX Directive

The ATEX Directive defines what equipment is permitted in an environment where an explosive atmosphere may exist.

Portwest recommends using garments certified to EN 1149 for added protection in an ATEX environment.

Portwest garments have not been assessed under the ATEX directive which currently excludes PPE.

Portflame Plus 5.5oz

Catering to the requirements for flame and arc resistance, this Portflame Plus™ fabric offers a very light weight with the highest level of protection. Providing a high moisture absorption and comfort due to the Viscose fibers, the Modacrylic/ Aramid blend enhances the feel and comfort to a very high level, without compromising on the thermal performance of the fabric.

Constructed using 50% Viscose, 30% Modacrylic, 18% Aramid, 2% Anti-Static, Portflame Plus™ is available in 5.5oz.

- Inherently Flame Resistant Portflame Plus™ guarantees to hold its flame resistant properties indefinitely after multiple washes.
- Extremely robust Portflame Plus™ will not ignite, melt or shrink when exposed to heat.
- Preshrunk and color fastness, this fabric has high shrink resistance and won't lose its color after multiple washes.
- Provides anti-static properties
- Flame Resistant certification and standards exceed international safety standards for flame and electric arc protection.

Bizflame Work 7oz

Bizflame® is a proprietary flame resistant finish which, when applied to fabric, gives excellent flame resistance. The carbon fiber yarns make the garments antistatic.

- High ATPV on Bizflame Work fabric provides ARC 2 (13.6 CAL/CM²) electric arc protection.
- Anti-Static carbon fibers provide built in anti-static properties exceeding EN1149-5 standard.
- Exceptional tensile strength ensures the fabric can withstand superior job-rated abrasion and tear resistance.
- High level of breathability and moisture wicking properties provides lasting comfort for the wearer.

Flame Resistant Bizweld

100% Cotton 9.5oz

Bizweld is a proprietary, flame resistant, 100% high grade cotton fabric. This is a high technology fabric developed for maximum performance, comfort and durability.

Bizweld is made from 100% ringspun cotton yarns offering excellent pilling resistance while guaranteeing comfort, warmth and protection for the wearer. The finish applied to the fabric ensures it will hold its flame resistant protective properties for at least 50 washes (EN standards) and 100 washes (US standards).

Bizweld fabric is independently tested and certified to exceed the international safety standards for flame and welding protection. This fabric is globally available and is worn with confidence by thousands of workers across the oil and gas, welding and allied industries.

- Outstanding flame-resistant performance exceeds international safety standards for flame and welding protection (EN ISO 11612 and EN ISO 11611).
- Provides exceptional protection against radiant, convective and contact heat as well as molten metal splashes.
- Provides 11.2 CAL/CM² electric arc protection.
- Provides a high level of protection against molten metal splashes. Ideal for welding and allied processes.
- Outstanding results for burn injury prediction when tested to the optional test ISO 13506 under EN ISO 11612.

FABRIC INFORMATION

DuraDuck Flame is a high-performance ultra durable fabric constructed from 100% Cotton Duck 10oz, engineered with maximum safety and comfort in mind. Designed to bead away water, the wind resistant properties combined with lightweight insulation ensures the worker is protected from the elements. This unique fabric provides exceptional flame resistant protection and is fully compliant to NFPA 70E with ARC4 protection against electric arc.

FABRIC INFORMATION

Catering to the requirements for flame and arc resistance, this Portflame Plus™ fabric offers a very light weight with the highest level of protection. Providing a high moisture absorption and comfort due to the Viscose fibers, the Modacrylic/ Aramid blend enhances the feel and comfort to a very high level, without compromising on the thermal performance of the fabric. Constructed using 50% Viscose, 30% Modacrylic, 18% Aramid, 2% Anti-Static, Portflame Plus™ is available in 5.5oz.

118 YEARS OF INNOVATION

Portwest workwear offers a range of designs and features suitable for many end uses. Quality fabrics and construction techniques are used guaranteeing comfort and safety. Tested to withstand the rigors of everyday wear each garment has been carefully designed and manufactured to ensure optimum quality at the best price.

Kingsmill™ Cotton Flex is a premium cotton flex fabric. This twill weave blend of 98% cotton and 2% elastane provides the ultimate in comfort and flexibility. The high cotton content gives an ultra soft handle, and the added elastane delivers ease of movement.

Kingsmill™ Polycotton Flex fabric is constructed from 65% polyester, 33% cotton and 2% elastane. This premium workwear fabric offers excellent abrasion and tear-resistant properties whilst the stretch function ensures full ease of movement for the wearer.

Kingsmill™ Cotton is available in five weights; 6.7oz, 9oz, 10oz, 10.8oz and 12.3oz. This fabric is fully pre-shrunk and has excellent dye retention properties. The long staple fibers used in the construction process provide strength, pilling resistance and a quality finish.

Kingsmill™ is 65% Polyester 35% Cotton and is available in four weights; 10.6oz, 8.6oz, 7.4oz and 6.7oz. This fabric guarantees high performance and maximum comfort. The yarns are all ring spun with long staple combed cotton providing a smooth handle and excellent pilling resistance. The material is fully pre-shrunk and has superior dye retention.

Portwest's innovative two way Kingsmill™ Polycotton Stretch fabric is constructed from 65% polyester, 35% cotton. This premium workwear fabric offers excellent abrasion and tear resistant properties whilst the mechanical stretch function ensures full ease of movement for the wearer. A UPF rating of 50+ on this fabric blocks 98% of the UV rays.

All Kingsmill™ fabric has a UPF rating of 40+ so will block 98% of the UV rays which fall on the garment.

HIGH PERFORMANCE FABRICS

Portwest All Weather Protection is engineered with exceptional fabrics and designs, allowing an easy transition between work and leisure. Tested to withstand the rigors of everyday wear, each garment has been designed and manufactured using the best quality materials and high technology construction techniques to ensure total satisfaction with wear after wear.

Portwest Extreme is a premium high performance, breathable rainwear fabric constructed from 100% Polyester, 300D Stretch Oxford 6oz and offers superior comfort, function and endurance in all weather conditions. Waterproof and wind proof to the highest standards, this fabric far exceeds the current highest industry requirements.

The Sealtex® range of fabrics are constructed using high technology coated fabrics on a flexible highly tear resistant 100% polyester tricot knit. The welded seams used on all Sealtex garments ensure rain and wind are locked out and the durable, stretchy fabric can easily be wiped clean so Sealtex garments look good and last longer.

The Ripstop collection is constructed using a highly innovative 100% polyester, PVC coated ripstop fabric. The polyester fabric combined with the Ripstop pattern provides an extremely strong yarn which is highly durable and tear resistant. The tough outer shell guarantees outstanding waterproof protection at all times.

Texpel™ SOS, Splash, Oil and Stain is a premium fabric finish which repels oil and liquids, causing them to bead up and roll off the fabric surface. The finish also helps release stains in the washing process, keeping garments looking cleaner for longer.

Constructed using hollow fiber technology, Insulutex™ provides a lighter and warmer thermal lining. The unique fabric technology locks in the body's warmth to create a thermal barrier with the high performance material offering superior lightweight comfort to the wearer without adding bulk.

FABRIC INFORMATION

Sealtex Classic is a high technology, PU coated fabric, on a flexible, highly resistant 100% Polyester tricot knit, 6oz. Sealtex Classic fabric is tested regularly to ensure it meets and exceeds waterproof standards. Independent test houses carry out hydrolysis and hydrostatic testing. Sealtex Classic consistently achieves top results in these tests.

FLEX SHELL JACKET

PW3 FLEX SHELL

Portwest PW3™ Flex Shell fabric is the latest evolution of softshell fabrics to deliver maximum performance and protection from the weather.

This highly durable 3-layer laminate fabric is water repellent and windproof with a stretch finish. Incredible suppleness offers outstanding user comfort. With low weight to high warmth ratio, the soft mesh inner face feels dry and comfortable next to the skin during extended periods of wear.

PORTWEST® COOLING 360°

CV04
290

THE LATEST IN COOLING TECHNOLOGY

This innovative range offers a comprehensive selection of products to help minimize the risk of heat stress and UV rays. Outdoor workers in construction, agriculture, mining, oil and gas and other industries frequently find themselves working in temperatures up to and over 100°F (40°C). This cooling range is ideal for use in these conditions.

FABRIC INFORMATION

Portwest evaporative cooling products are constructed from Cooling 360° Fabric Technology which uses a unique polymer chemistry. Simply activate by soaking in water creating a chemical reaction within the fabric which enables the garments to act like a sponge; retaining water, keeping the body cool in hot weather conditions.

**THE GARMENT WILL REMAIN HYDRATED FOR SEVERAL HOURS

QUALITY SAFETY FOOT PROTECTION

The Portwest foot protection range has been engineered for maximum safety and outstanding performance. Packed with safety features and designed using strong, flexible and innovative construction techniques. This complete range protects against safety hazards found in tough working environments, across a wide range of industries.

An exceptional collection of safety footwear made using high quality materials and components. Portwest Steelite footwear contains protective steel toecaps and/or steel midsoles, offering outstanding protection even in the toughest work environments.

A modern collection of metal free safety footwear, Portwest Compositelite™ offers lightweight protection for all day comfort. Constructed using non-metallic protective fiberglass toecaps and/or non-metallic protective midsoles, this collection is ideal for use in environments where metal free protection is essential.

ASTM F2413-18

Standard specification for performance requirements for protective (safety) toecap footwear.

The specification contains performance requirements for footwear to protect workers feet from the following hazards by providing:

- I** Impact resistance (I) for the toe area of footwear.
- C** Compression resistance (C) for the toe area of the footwear.
- Mt** Metatarsal impact protection (Mt) that reduces the chance of injury to the metatarsal bones at the top of the foot.
- Cd** Conductive properties (Cd) which reduce hazards that may result from static electricity build up, and reduce the possibility of ignition of explosives and volatile chemicals.
- EH** Electric hazard protection (EH), to protect the wearer when accidental contact is made by stepping on live electric wires.
- SD** Static dissipative properties (SD) to reduce hazards due to excessively low footwear electrical resistance that may exist where SD footwear is required.
- PR** Puncture resistance (PR) for footwear devices.

ASTM
F2413-18

EN ISO 20345:2011

This international standard specifies basic and additional (optional) requirements for safety footwear used for general purposes. It includes, for example, mechanical risks, slip resistance, thermal risks, ergonomic behaviour.

The classification system used to identify the protection provided by the footwear is listed:

Category	Additional requirements
SB	The presence of a safety toecap providing protection against impact injury to the toes caused by falling objects. Level of protection provided is 200 joules. Prevention of compression injury to the toes if trapped under a heavy object. Level of this protection is 15kN.
SBP	As SB standard plus penetration resistance.
S1	As SB standard plus closed seat region, antistatic properties, resistance to fuel oil and energy absorption of seat region.
S1P	As S1 standard plus penetration resistance.
S2	As S1 standard plus water penetration and water absorption resistance.
S3	As S2 standard plus cleated outsole and penetration resistance.
S4	200 joule toecap protection. All rubber or all polymeric footwear with antistatic properties. Resistance to fuel oil, energy absorption of seat region and closed seat region.
S5	As S4 standard plus cleated outsole and penetration resistance.

EN ISO 20347:2012

The International Standard specifies basic and additional (optional) requirements for occupational footwear that is not exposed to any mechanical risks (impact or compression).

Requirement	Symbols
 Whole Footwear	Penetration resistance P Electrical properties: Antistatic footwear A Resistance to inimical environments: Cold insulation of sole complex CI Energy absorption of seat region E Water resistant WR Metatarsal protection M
 Upper	Water penetration and absorption WRU
 Outsole	Resistance to hot contact HRO Resistance to fuel oil FO

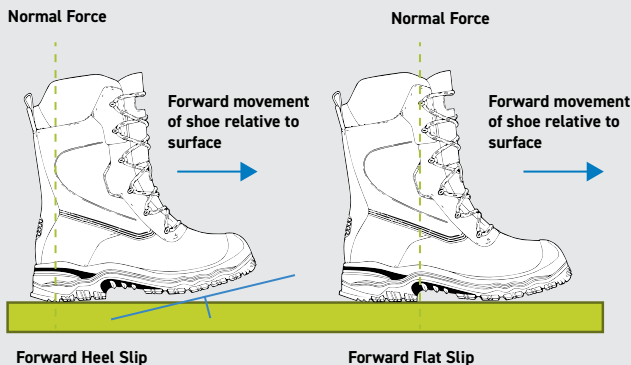

Category	Additional requirements
0B	Conforms to the basic requirements set out by the standard EN ISO 20347: 2012
01	Closed seat region, antistatic properties, energy absorption of seat region
02	As 01 plus: Water penetration and absorption
03	As 02 plus: Penetration resistance, cleated outsole
04	Closed seat region, antistatic properties, energy absorption of seat region
05	As 04 plus: Penetration resistance, cleated outsole

ISO 13287:2019

This International Standard specifies a method of test for the slip resistance of conventionally soled safety, protective and occupational footwear. It is not applicable to special purpose footwear containing spikes, metal snaps or similar.

The item of footwear to be tested is put on a surface, subjected to a given normal force and moved horizontally relative to the surface. The frictional force is measured and the dynamic coefficient of friction is calculated.

If the outsole passes both the ceramic tile test (SRA) and the steel floor test (SRB) it is marked as SRC.

ISO 13287:2019

Marking Code	Test Surface	Coefficient of Friction (ISO 13287:2019)	
		Forward Heel Slip	Forward Flat Slip
SRA	Ceramic tile with SLS*	≥ 0.28	≥ 0.32
SRB	Steel floor with Glycerol	≥ 0.13	≥ 0.18
SRC	Ceramic tile with SLS* and Steel floor with Glycerol	≥ 0.28	≥ 0.32
		≥ 0.13	≥ 0.18

*Water with 5% Sodium Lauryl Sulphate (SLS) solution

Portwest continues to push the boundaries in sustainable foot protection with the introduction of an eco-conscious safety sneaker.

The use of certified recycled materials, where possible, ensures minimal impact on the environment. Made from recycled PET bottles, the lightweight Eco Safety Sneaker is designed for maximum safety, comfort and performance while offering a stylish on-trend modern look.

347

MARKET LEADING HAND PROTECTION

A newly expanded range of hand protection styles that caters for all work and safety needs. Only the best materials and manufacturing methods are used in the production of this extensive and highly specialized range.

CUT

CUT PROTECTION

37 cut protection styles, give varying degrees of protection depending on the level required.

IMPACT

IMPACT PROTECTION

Gloves specifically designed to protect from impact hazards. Tested to ANSI/ISEA 138 standard for impact.

GRIP

DURABLE GRIP

Designed to enhance grip for precision work, protecting from a range of hazards.

TOUCH

SCREEN FRIENDLY

Designed specifically for use with touchscreen monitors and devices.

AQUA

LIQUID BARRIER

These gloves are the ultimate barrier to water, liquids, and non aggressive substances, and include highly water resistant gloves.

NANO

REPELS LIQUID

High tech nano coating repels liquids and maintains breathability.

MECHANIC

GENERAL HANDLING

Precision handling in dry and wet environments.

VEND

PACKAGING SOLUTION

Improving usage monitoring and inventory control.

THERM

COLD PROTECTION

Specifically designed hand protection against the hazard of cold stress.

PRO

SPECIALIST HAND PROTECTION

Specialist gloves such as anti-vibration and arc flash protection.

LEATHER

MULTI PURPOSE

Multi-purpose gloves with abrasion and tear resistance.

WELD

WELDING PROTECTION

Protection when working with hot temperatures and heated materials.

CHEM

CHEMICAL PROTECTION

Protection against the most commonly used chemicals in the industry.

DISPOSABLE

Disposable gloves of varying thickness to suit the needs of different work situations.

HAND PROTECTION GUIDE

FIND THE RIGHT GLOVE FOR THE JOB

BELOW IS A GUIDE TO MATERIALS USED AND THE PERFORMANCE FACTORS ASSOCIATED. THIS WILL AID IN DECISION MAKING TO SECURE THE RIGHT HAND PROTECTION FOR THE JOB.

GLOVE LINER TYPE

KNITTED SEAMLESS

Highly breathable and close fitting for good dexterity. The seamless liner avoids irritation offering improved comfort.

SEWN AND IMPREGNATED

Available with several types of construction and assembly, mainly cut and sewn. Coating is bound to the fabric for good resistance to abrasion. Sewing and impregnation process allows the manufacturing of thin gloves, for enhanced dexterity.

COATED/DIPPED

Made by dipping a knitted or woven cloth liner into the glove compound - the liner supports the compound and adds strength. The compound used enhances the mechanical performance with different compounds used for different conditions.

GLOVE LINER MATERIAL

HPPE

High performance cut resistance, comfort, abrasion resistance

LEATHER: SPLIT GRAIN

Abrasion resistance, durable. Dry grip

NYLON

Stretch / elasticity

PARA-ARAMID

Cut resistance / heat resistance

COTTON

Comfort / breathability

UHWPE

Premium cut resistant, free from steel and glass fibers

LEATHER: SMOOTH GRAIN

Durable, supple, oil and water repellent

POLYESTER

Durability

GLASS FIBER

Cut resistance

ACRYLIC

Insulation

DIPPING MATERIAL

NITRILE

Excellent resistance to snag, cut, puncture and abrasion. Dry grip

NEOPRENE

Dry, wet and oil grip

NITRILE SANDY

Wet and dry grip. High abrasion resistance

NITRILE MICRO FOAM

High dexterity with improved touch sensitivity

NITRILE FOAM

Oil and wet grip

PU

Good abrasion resistance. Dry grip

LATEX

Dry and wet grip

PVC

Good abrasion resistance. Dry, wet and oily grip

TPR

Impact protection

TPV

Impact protection

TPE

High grip and abrasion resistance

CUFF STYLE

BEADED

Optimized liquid protection with increased cuff strength

STRAIGHT

Additional length which protects forearm from liquid runoff

PINKED

Traditional style, improved edge grip for ease of donning and glove removal

SUPPORTED GLOVES

A liner is dipped into a compound material.

GAUNTLET

Additional length which protects forearm (4" plus)

KNITWRIST

Securely fits gloves in place and prevents dirt entering the glove

SAFETY CUFF

Provides additional wrist protection (2.5" in length)

SLIP ON CUFF

Easy donning, economical design

UNSUPPORTED GLOVES

Molds are dipped directly into a compound material, giving the wearer maximum dexterity. There are two options, unlined or flock-lined with cotton or rayon polyester for improved comfort

CHOOSING THE RIGHT GLOVE SIZE

HOW TO MEASURE:

Place your right hand on the diagram with the line between your thumb and index finger. The line closest to the right side of your hand indicates the best fitting glove size.

OR Measure the circumference of your hand at the palm using a tape measure. The size chart explains which size glove will fit you best.

GLOVE AND HAND SIZE CHART AS PER STANDARD EN21240

Hand Size	5	6	7	8	9	10	11	12	13

HAND PROTECTION STANDARDS EXPLAINED

ANSI/ISEA-138

American National Standard for Performance and Classification for Impact-Resistant Gloves (ANSI/ISEA 138-2019)

This new standard provides an improved method of classifying impact protection to the back of the hand. The test is conducted by dropping a 5-joule mass on the impact points of the glove, recording the force transferred in kilonewtons (kN). This test is repeated eight times for the knuckles and ten times for the fingers. Gloves are classified based on test result average of the tests conducted. To classify as an ANSI/ISEA 138 level 1, 2, or 3, the average and all test results must be within the classification parameters.

Classification For Impact Resistance		
Performance levels	Mean (kN)	All impact (kN)
1	≤ 9	< 11.3
2	≤ 6.5	≤ 8.1
3	≤ 4	≤ 5

ASTM F2675-13

Test Method For Determining Arc Ratings of Hand Protective Products Developed and Used for Electrical Arc Flash Protection.

This test method is used to measure and describe the properties of hand protective products in response to convective and radiant energy generated by an electric arc under controlled laboratory conditions. There are 4 levels in the Hazard Risk Category rated by the ATPV (Arc Thermal Performance Value).

Hazard Risk Category	Minimum ATPV cal/cm ²
0	n/a
1	4
2	8
3	25
4	40

ANSI/ISEA 105

American National Standard for Hand Protection

This standard addresses the classification and testing of hand protection for specific performance properties related to chemical and industrial applications. Hand protection includes gloves, mittens, partial gloves, or other items covering the hand or a portion of the hand that are intended to provide protection against or resistance to a specific hazard.

5.1 Mechanical Protection

5.1.1 Cut Resistance

The new ASTM F2992-15 test replaces ASTM F1790-05 and ensures uniform testing plus increases the performance levels beyond the old level 5. The sample is cut 15 times by a straight edge blade, under load. A new blade is used for each cut. The data is then used to determine the required load to cut through the material and this in turn is equated to a cut level. The new levels are now prefixed with the letter A.

Table 1 Classification for Cut Resistance

Level	Load (grams)
-	<200
A1	201-499
A2	500-999
A3	1000-1499
A4	1500-2199
A5	2200-2999
A6	3000-3999
A7	4000-4999
A8	5000-5999
A9	>6000

5.1.2 Puncture Resistance

When tested in accordance with Clause 6.4 of EN 388:2003 Protective gloves against mechanical risks, the gloves resistance against puncture shall be classified against the levels listed in Table 2, using the puncture force.

The average of a minimum of 12 specimens shall be used to report the classification level.

Table 2. Classification for Puncture Resistance

Level	Table 2. Classification For Puncture Resistance Level : Puncture (Newtons)
0	<10
1	≥ 10
2	≥ 20
3	≥ 60
4	≥ 100
5	≥ 150

5.1.3 Abrasion Resistance

When tested in accordance with ASTM D3389-05, Standard Test Method for Coated Fabrics Abrasion Resistance or ASTM D3884-09, Standard Guide for Abrasion Resistance of Textile Fabrics (Rotary Platform, Double-Head Method), the gloves abrasion resistance shall be classified against the levels listed in Table 3 using the number of abrasion cycles to failure (test endpoint). These test methods shall be followed using H-18 abrasion wheels with a 500 gram load for levels 0 to 3 and a 1000 gram load for levels 4 to 6. Using ASTM D3389-05 for coated glove fabrics or unsupported gloves, the end point at which the glove material is determined to fail shall be at the number of abrasion cycles just before the film or coating has a hole abraded through it. Using ASTM D3884-05 for coated glove fabrics, the end point shall be when the first thread or yarn is broken. The average of a minimum of 5 specimens shall be used to report the classification level.

Table 3. Classification for Abrasion Resistance

Level (tested at 500g load) :	Abrasion cycles to fail
0	<100
1	≥ 100
2	≥ 500
3	≥ 1000
Level (tested at 1000g load)	
4	≥ 3000
5	≥ 10,000
6	≥ 20,000

5.2 Chemical Protection

5.2.1 Chemical Permeation Resistance

When tested in accordance with ASTM F739-07, Standard Test Method for Permeation of Liquids and Gases through Protective Clothing Materials under Conditions of Continuous Contact the gloves chemical permeation shall be classified against the levels listed in Table 4 using the average standard breakthrough time (for each chemical tested). The average of a minimum of 3 specimens shall be used to report the classification level. In reporting permeation data for each chemical the permeation rate shall be reported in $\mu\text{g}/\text{cm}^2 \text{ min}$. It shall be permitted to report the cumulative permeation in g/cm^2 that occurs within 1 hour of the test for each chemical.

Table 4. Classification for Chemical Permeation

Level	Standard breakthrough time (minutes)
0	< 10
1	≥ 10
2	≥ 30
3	≥ 60
4	≥ 120
5	≥ 240
6	≥ 480

5.4 Heat and Flame Protection

5.4.1 Ignition Resistance and Burning Behavior (or AfterFlame Time)

When tested in accordance with ASTM F1358-08, Test Method for Effects of Flame Impingement on Materials Used in Protective Clothing Not Designated Primarily for Flame Protection, the glove materials ignition resistance and burning behavior shall be classified against the levels listed in Table 6, using ignition time and burn time. In order to be classified at a specific level, the glove material shall meet each of the criteria at that specific level. The average of a minimum of 3 specimens shall be used to report the classification level.

Table 6. Classification for Ignition Resistance and Burning Resistance

Level	Time exposed to flame (s)	After-flame time (s)
0	3	> 2
1	3	≤ 2
2	12	> 2
3	12	≤ 2
4	no ignition in either 3 or 12 second exposure period	

5.4.3 Conductive Heat Resistance

When tested in accordance with ASTM F1060-08 Test Method for Thermal Protective Performance of Materials for Protective Clothing for Hot Surface Contact, the gloves conductive heat resistance shall be classified against the levels listed in Table 8. Classification of glove performance shall be based on the contact (surface) temperature at which both the time-to-second degree burn is equal to or greater than 15 seconds, and the alarm time is greater than 4 seconds.

The average of a minimum of 5 specimens shall be used to report the classification level.

Table 8. Classification for Conductive Heat Resistance

Level	Highest contact temperature(°F) at which both time-to-2nd degree burn > 15 seconds and alarm time > 4 seconds
0	< 80
1	80
2	140
3	200
4	260
5	320

5.6 Dexterity

When tested in accordance with EN420:2003, Protective gloves- General requirements and test methods, clause 6.2, the dexterity shall be classified against the levels in Table 9, using smallest diameter of the pin that can be picked up.

The average of 4 pairs of gloves shall be used to report the classification level.

Table 9. Classification of Dexterity

Level	Smallest diameter of pin fulfilling test conditions (mm)
1	11
2	9.5
3	8
4	6.5
5	5

EUROPEAN HAND PROTECTION STANDARDS

EN ISO 21420:2020 – Protective Gloves – General Requirements And Test Methods (Updated From En 420:2003+A1:2009)

Under EN ISO 21420 this standard defines the general requirements for glove design and construction, sizing, dexterity, water vapor transmission and absorption, electrostatic properties (in accordance with EN16350:2014) and innocuousness.

Innocuousness test now includes, pH (between 3.5 and 9.5), Chromium VI for leather products (less than 3mg/kg), nickel release for metallic components, azo colorants (less than 30mg/kg), dimethylformamide or DMFa in Polyurethane products (less than 1000mg/kg), Poly Aromatic Hydrocarbons or PAH (less than 1mg/kg). The innocuousness testing covers where applicable elements of regulations such as REACH (Regulation (EC) No 1907/2006) Annex XVII.

Protective Gloves Against Mechanical Risks – EN388:2016+A1:2018

Over recent years, changes in the manufacturing process of protective gloves has meant that the well established method of hand protection testing (EN388:2003), and in particular the test to assess protection against cuts has now been deemed no longer fit for purpose. Whilst the old system in EN388:2003 and its 1-5 numbering system was easy to understand, the development of newer cut resistant materials combined with a drive from industry to provide the highest level of cut protection possible meant that the method for testing hand protection needed to be revised.

EN388:2016 seeks to update the standard and by doing this, 2 tests have been revised (abrasion and cut) and 2 new tests have been included (straight blade cut resistance and impact resistance).

EN388:2003 standards specifies physical and mechanical aggression caused by abrasion, blade cut, tearing and puncture. EN388:2016 updates the existing standard with this new test method for abrasion, blade cut and impact resistance. EN ISO 13997:1999 (TDM test) records cut results as a newton value - the force of the blade on the glove material needed to cut through the material 20mm. The results are represented on a scale A-F.

1 3 4 1 E P

REQUIREMENTS

Performance level P Impact Resistance

Impact-resistant properties to 5J.

PERFORMANCE LEVELS A – F

STRAIGHT BLADE CUT RESISTANCE:

(TDM cut test) Measures the average load to achieve the moment of cut-through

PERFORMANCE LEVELS 1-4

d: PUNCTURE RESISTANCE:

Force required to pierce the sample with a standardized punch.

PERFORMANCE LEVELS 1-4

c: TEAR RESISTANCE:

Maximum force required to tear the sample.

PERFORMANCE LEVELS 1-5

b: BLADE CUT RESISTANCE: (Coup cut test)

Number of cycles required to cut the sample at constant speed.

PERFORMANCE LEVELS 1-4

a: ABRASION RESISTANCE:

Number of cycles required to damage the sample at constant speed.

EN 388:2016	Level 1	Level 2	Level 3	Level 4	Level 5
Abrasion resistance (number of cycles)	100	500	2,000	8,000	-
Blade cut resistance (index) Coup test method	1.2	2.5	5	10	20
Tear resistance (N)	10	25	50	75	-
Puncture resistance (N)	20	60	100	150	-

EN ISO 13997:1999 TDM	Level A	Level B	Level C	Level D	Level E	Level F
Cut resistant test levels (N)	2	5	10	15	22	30

EN 1082 Parts 1 to 3: 1997 to 2000

Parts 1 to 3: Protective clothing.

Gloves and arm guards protecting against cuts and stabs by hand knives.

EN407

Protective Gloves Against Thermal Risks (Heat and/or Fire) EN 407: 2004 (AS/NZS 2161.4)

This standard specifies thermal performance for protective gloves against heat and/or fire. The heat and flame pictogram is accompanied by a 6 digit number.

1 3 1 2 1 2

REQUIREMENTS

PERFORMANCE LEVELS 1-4

f: RESISTANCE TO A LARGE MELTING METAL SPRAY:

Amount of spray required to raise the glove to a certain temperature.

PERFORMANCE LEVELS 1-4

e: RESISTANCE TO SMALL MELTING METAL SPRAY:

Amount of spray required to raise the glove to a certain temperature.

PERFORMANCE LEVELS 1-4

d: RESISTANCE TO RADIATING HEAT:

Time required to raise a given temperature level.

PERFORMANCE LEVELS 1-4

c: RESISTANCE TO CONVECTIVE HEAT:

Time during which the glove is able to delay the transfer of heat of a flame.

PERFORMANCE LEVELS 1-4

b: RESISTANCE TO CONTACT HEAT:

Temperature (within the range of 100°C / Over 200°F to 500°C / Over 930°F) at which the person wearing the gloves will not feel any pain (for a period of at least 15 seconds).

PERFORMANCE LEVELS 1-4

a: RESISTANCE TO FLAMMABILITY:

Time during which the material remains lit and continues to be consumed after the ignition source has been eliminated.

B: RESISTANCE TO CONTACT HEAT:

PERFORMANCE LEVEL	CONTACT TEMPERATURE (°C)	THRESHOLD TIME (Second)
1	100°C / Over 200°F	≥15s
2	250°C / Over 480°F	≥15s
3	350°C / Over 660°F	≥15s
4	500°C / Over 930°F	≥15s

EN407

EN 407:2020 – Glove Protective Against Thermal Risks

This standard was updated from the 2004 version in April 2020. Test 1 for resistance to flammability or burning behavior has been amended to Limited Flame Spread, and covers the inclusion of oven mitts to be classed as PPE. If a glove is tested only for contact heat an alternative symbol is used to indicate protection against heat without flame. Gloves certified to the 2004 version of the standard do not need to change until the existing certificate expires.

EN12477

Protective Gloves for Welders

EN 12477: 2001 (AS/NZS 2161.3)

This European Standard specifies requirements and test methods for protective gloves for use in manual metal welding, cutting and allied processes. According to their performance, protective gloves for welders are classified into two types.

Type A: Lower dexterity (with higher other performance)

Type B: Higher dexterity (with lower other performance).

EUROPEAN HAND PROTECTION STANDARDS

EN374

Protective Gloves : Against Chemicals And Micro-Organisms EN ISO 374-1:2016 (AS/NZS 2161.10.1)

Terminology and performance requirements for chemical risks. New to the standard - There are now 3 standard classes related to the performance level and number of chemicals they protect against. There are 6 additional chemicals to test against. There is a requirement to test for degradation EN 374-4:2013. EN374-3:2003 is

withdrawn and is replaced by EN 16523-1:2015. Gloves longer than 15.7" will have to be additionally tested in the cuff area. The requirement for testing to EN388 has been removed. The "low chemical" or "waterproof" beaker symbol has been withdrawn.

ISO 374-1:2016/Type C

X - Low Chemical

ISO 374-1:2016/Type B

XYZ

ISO 374-1:2016/Type A

UVWXYZ

Code	Chemical	Class
A	Methanol	Primary alcohol
B	Acetone	Ketone
C	Acetonitrile	Nitrile compound
D	Dichloromethane	Chlorinated paraffin
E	Carbon Disulphide	Sulphur containing organic compound
F	Toluene	Aromatic hydrocarbon
G	Diethylamine	Amine
H	Tetrahydrofurane	Hetero-cyclic and ether compound
I	Ethyl Acetate	Ester
J	n-Heptane	Saturated hydrocarbon
K	Sodium hydroxide 40%	Inorganic base
L	Sulphuric acid 96%	Inorganic mineral acid
M	65% Nitric Acid	Inorganic mineral acid, oxidizing
N	99% Acetic Acid	Organic acid
O	Ammonia hydroxide 25%	Organic acid

S	40% Hydrofluoric acid	Inorganic inert acid, contact poison
T	37% Formaldehyde	Aldehyde

EN ISO 374-2:2014 Determination of resistance to penetration

There are no major changes from EN374-2:2003

ISO 374-5:2016

Marking of gloves protecting against, bacteria and fungi

EN ISO 374-4:2013 Determination of resistance to degradation by chemicals (DR)
New to the standard - tests puncture resistance before and after exposure to a challenge chemical. The average of the performance will be recorded in the usersheet as a percentage (%).

ISO 374-5:2016

Additional marking for Virus

EN ISO 374-5:2016 Terminology and performance requirements for micro-organisms risks
Microorganisms are classed as bacteria, viruses or fungi. Gloves protecting against viruses must also pass ISO16604:2004.

EN 16523-1:2015 Micro Mesh Polo Permeation by liquid chemical under conditions of continuous contact.
This test is similar to EN374-3 therefore gloves certified to EN374-3 do not need to be retested.

EN 16350:2014

Protective Gloves: Electrostatic Properties

This European standard specifies a test method for the electrostatic properties of gloves. The test improves on EN1149 as it requires a lower vertical resistance of less than 10 ohms. Gloves tested to EN16350:2014 can be used in areas where there may be an increased risk of explosion, such as in a refinery.

IEC 61340-5-1:2016

Protection of Electronic Devices from Electrostatic Phenomena: General Requirements

This standard specifies a test method for PPE products used in high sensitive areas where an electrostatic charge can potentially cause damage to delicate components such as electrical circuit boards and microchips.

All gloves in the Portwest ESD Glove collection have been tested to both standards.

EN ISO 10819

Protective Gloves: Mechanical Vibration and Shock EN 10819: 1996 (AS/NZS 2161.3)

This European Standard specifies a method for the laboratory measurement, the data analysis and reporting of the vibration transmissibility of gloves in terms of vibration transmission from a handle to the palm of the hand in the frequency range from 31.5 Hz to 1250 Hz. The standard is intended to define a screening test for the vibration transmission through gloves.

EN 455:2000

Medical gloves for single use

Part 1: Requirements and testing for freedom from holes
Part 2: Requirements and testing for physical properties
Part 3: Requirements and testing for biological evaluation
Part 4: Requirements and testing for shelf life determination

CE foodsafe

European legislation with respect to Food Contact Materials (Directive EC1935/2004) requires that food contact materials shall not transfer their ingredients to food and must not modify the organoleptic properties (ie. color, smell, texture and taste) of the food. Products intended for food contact shall be labeled as such.

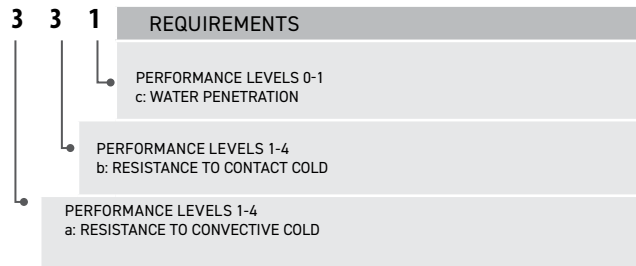

EN511

Protective Gloves Against Cold

EN 511:2006 (AS/NZS 2161.5)

The European standard specifies the requirements and test methods for gloves which protect against conductive cold down to -50°C/-120°F. This cold can be linked to the climate conditions or an industrial activity.

EN381

Protective Gloves : For Users Of Hand Held Chainsaws

EN 381-7: 1999

This European Standard specifies the requirements for gloves for resistance to cutting by a chainsaw when assessed by the test method described in EN381-4. The requirements are also given for marking and for the provision of information to be supplied by the manufacturer including criteria for the selection of appropriate gloves and instructions for use.

CLASS 1

Class	0	1	2	3

ULTIMATE HAND PROTECTION

An advanced new collection of hand protection, with an expertly designed fit, providing maximum dexterity for precision handling.

Made from sustainable materials, this collection is eco-conscious while offering ultimate protection. Packed with advanced features that offer unrivalled grip, maximum comfort and cut protection. The collection also features advanced 360 breathability technology to maintain a comfortable hand temperature and touch screen functionality. All the innovation, design and quality you should expect in modern hand protection.

SUPERIOR FIT - MAXIMUM DEXTERITY

Innovatively designed, SG hand protection boasts level 5 dexterity.

ECO-CONSCIOUS

Made from recycled PET, each glove repurposes a 500ml plastic bottle. The gloves are sustainably made, using lower CO2 emissions, lower energy and water consumption than other gloves.

FEATURE-RICH DESIGN

Combining grip, touch screen capability and cut resistance, this is an impressive all-round modern hand protection collection.

FOR SAFE HANDLING OF SHARP OBJECTS

Hand injury is one of the most frequent types of accident reported in the working environment, with cuts and lacerations the biggest concern in this area. Portwest's range of cut resistant gloves gives varying degrees of protection depending on what level is required.

CUT PROTECTION SUITABLE FOR ALMOST EVERY TASK

Portwest has over 37 styles of cut resistant gloves and sleeves to suit almost every task. Portwest continually works on bringing new and improved cut resistant styles to the market. Use the Portwest Cut Protection Selection Guide to help in selecting the best protection for your application.

37 CUT RESISTANT PROTECTION STYLES

- ✔ Protects hands against the risk of cut
- ✔ Multiple material gauges that offer high levels of dexterity
- ✔ Available in a range of coatings for grip in dry, wet and oily conditions

CUT PROTECTION SELECTION GUIDE

In order to assist in selecting the best cut gloves for your application, Portwest suggest using this 3 step process:

Step 1: Rate the Level of Hazard and Risk

Identify the hazard and decide on risk of injury by carrying out a risk assessment.

Identify the level of hazard:

No Hazard

1

Severe Hazard

10

Identify the level of risk:

RISK OF INJURY FACTOR	
No Perceived Risk	1
Very Low Risk	2
Low Risk	3
Medium Risk	4
High Risk	5
Very High Risk	6

Step 2: Calculate the Required Cut Performance Levels

Once you have carried out a risk assessment for the tasks you are performing you can use the **Hazard x Risk x 100** calculation to help select the appropriate levels of cut resistance.

Multiplying the hazard by the risk will provide a figure to base the required cut resistance on. Multiplying by 100 converts the figure into grams which is the unit of measure for the ANSI 105 testing. The table below explains the performance levels.

HAZARD	CUT PERFORMANCE (grams) = (Risk x Hazard) x 100					
10	1000	2000	3000	4000	5000	6000
9	900	1800	2700	3600	4500	5400
8	800	1600	2400	3200	4000	4800
7	700	1400	2100	2800	3500	4200
6	600	1200	1800	2400	3000	3600
5	500	1000	1500	2000	2500	3000
4	400	800	1200	1600	2000	2400
3	300	600	900	1200	1500	1800
2	200	400	600	800	1000	1200
1	100	200	300	400	500	600
RISK	1	2	3	4	5	6

Step 3: Find the Suitable Level of Cut Protection

Apply the performance level required in Step 2 to the ANSI 105 levels below to find a suitable level of cut protection.

Gloves are tested to a minimum performance level, so if you are unsure of the required level of cut protection choose the next level up. For example, if your assessment suggests 1200 grams then perhaps choose a level A4 glove.

LEVELS OF PERFORMANCE to ANSI 105									
Cut Level	A1	A2	A3	A4	A5	A6	A7	A8	A9
Cut Level (grams)	200	500	1000	1500	2200	3000	4000	5000	6000

PORTWEST has over **37 styles** of cut resistant gloves and sleeves from level **A1** to **A8** to suit almost every task. We are continually working on bringing new and improved cut resistant styles to market.

PREMIUM CUT PROTECTION

An unrivaled collection of uniquely comfortable, ultra-strong and breathable cut protection.

The CT collection of cut resistant gloves is unlike any other offering on the market. Using innovative fabrics and production techniques, these gloves are uniquely comfortable, ultra-strong, breathable and flexible.

DyUltra is a new cut-resistant material developed to provide the highest level of abrasion resistance in the market, stronger than para-aramids. This low weight fabric offers superior comfort whilst capable of providing cut protection beyond ANSI /ISEA 105 2016 Cut Level A8. It comprises high grade ultra-high molecular weight polyethylene (UHMWPE) materials which are 15 times stronger than steel. Flexible and comfortable to wear, it does not absorb moisture or lose its shape or performance even after 10 washes.

NO STEEL AND GLASS FIBERS

The CT collection is free from glass and steel fibers, ensuring they can be worn over long periods without skin irritation, these gloves are OEKO-TEX® certified for maximum skin-friendliness.

RETAINS CUT RESISTANCE UP TO 10 WASHES

Our innovative fabric construction ensures cut resistance levels are retained for up to 10 washes, as independently tested.

FULL RANGE OF CUT AND DEXTERITY LEVELS

This premium offering is certified to ANSI and available in cut levels from level A3 to level A8, and a range of gauges 7, 13, 15 and 18.

THIN PALM FOR HIGH DEXTERITY

ENHANCED CUT PERFORMANCE

Introducing the CS cut resistant hand protection collection. Packed with features such as touchscreen compatibility, reinforced thumb crotch and reflective labels for improved visibility in low light conditions.

Each glove comprises high performance polyethylene (hpe) which is 8 times stronger than steel. The CS collection is designed to provide the highest level of cut resistance whilst allowing the wearer to carry out tasks, safely and securely. This collection of eight gloves suit almost every working environment. Including an 18 gauge option for the highest dexterity, a latex coated option for optimal grip and a leather palm option for supreme heat protection. CS Collection ensures maximum safety when needed most.

8 HIGHEST LEVEL
CUT RESISTANCE
STYLES

- ✓ Reinforced thumb crotch for extra protection and durability
- ✓ High level cut resistance
- ✓ Touchscreen compatible

PROVIDES VITAL PROTECTION AGAINST ACCIDENTAL IMPACT

Hand injury is one of the most common and frequent complaints in the workplace. This collection of gloves provides vital protection against impact to the hand from multiple hazards.

DESIGNED FOR THE TOUGHEST ENVIRONMENTS

The latest development in glove technology, this collection of specially designed gloves provide protection to hands from impact hazards. Portwest Anti-Impact gloves utilize the latest research in materials technology in order to absorb a maximum amount of force from impacts.

7

IMPACT PROTECTION STYLES

- ✓ Designed to protect the back of the hand from accidental impact
- ✓ Protection for the fingers and knuckles
- ✓ ANSI ISEA 138 Level 1 and Level 2 protection options

ANSI/ISEA 138 IMPACT TESTING

ANSI/ISEA 138 sets out the minimum requirements in classification, performance and labeling for gloves designed to product from impact.

A force is dropped on the knuckles and thumb/fingers of the glove and the amount of force transferred to the glove back of hand is recorded. The lower kN measurement for each performance level, the better and means the glove is more safe from impact.

Levels of protection 1 to 3 is possible, 3 being the highest. See table.

PERFORMANCE LEVEL	MEAN TRANSMITTED FORCE	INCREASING PROTECTION
ANSI/ISEA 138  3	≤ 4kN	
ANSI/ISEA 138  2	≤ 6.5kN	
ANSI/ISEA 138  1	≤ 9kN

HIGH TECH NANO COATING REPELS LIQUIDS AND MAINTAINS BREATHABILITY

Innovative Liquid Repellency Helps to Keep Hands Drier

The PW Nano 6000 collection has been developed with a revolutionary coating which makes the glove super hydrophobic and oleophobic. This creates a barrier between the glove and the underlying surface. This barrier is unlike anything ever seen before and is revolutionary in the glove industry. In addition to the proprietary high tech nano coating, the PW Nano 6000 collection also offers superior abrasion resistance allowing it to be used in a variety of tasks.

CHEMICAL PROTECTION RANGE

Protection in Serious Environments

Find the perfect chemical protection glove to suit your application with this two-step guide:

Step 1. Identify the chemical you are using in the Enhanced Chemical Protection Guide table.

Step 2. Use the color coded key to identify the gloves that offer the best level of protection.

Key

Red	Not Recommended
Orange	Limited Splash Protection
Yellow	Splash Protection
Light Green	Short Term Exposure
Medium Green	Medium Term Exposure
Dark Green	Good Protection
Light Blue	Excellent Protection

CE Rating	Breakthrough Time (mins)
0	0 - 10 mins
1	10 - 30 mins
2	30 - 60 mins
3	60 - 120 mins
4	120 - 240 mins
5	240 - 480 mins
6	>480 mins

HAZARD PROTECTION

Biztex™ hazard protective clothing is an industry leading range of limited life garments certified to the highest international standards. The extensive Biztex™ range offers powerful protection against many workplace threats. The Biztex™ range is cost effective whilst offering the wearer innovative high tech protection.

ST30

376

A925

393

ANSI/ISEA 101 2014

The purpose of this standard is to provide minimum size, packaging and labeling requirements for limited-use and disposable coveralls.

EN 13982-1

EN13982 - 1 :2004 +A1: 2009

Dry particle suit (Type 5). This specifies the minimum requirements for chemical protective clothing resistant to penetration by air borne solid particles. Protects against hazardous dust and dry particles.

EN 1149

EN1149-5: 2018

Electrostatic requirements - surface resistivity (test method and requirements). This tests for the removal of electrostatic to avoid sparks that could cause fire/hazard to the wearer.

EN 13034

EN 13034: 2005 +A1 :2009

Reduce spray suit (Type 6) and partial body protection items (PB6). This specifies the minimum requirements for chemical protective clothing offering limited protective performance against liquid chemicals. This standard tests for liquid chemical (Type 6 and Type PB [6] equipment) sprays and splashes that are not directional or built up on a suit but there may be a fine mist of droplets in the atmosphere.

EN 14126

EN 14126: 2003

This specifies the requirements and test methods for limited use protective clothing providing protection against infective agents.

NUCLEAR PARTICLE

EN 1073-2: 2002

Protective clothing against radioactive contamination. Requirements and test methods for non-ventilated protective clothing against particulate radioactive contamination.

CHEMICAL PROTECTION

Chemical Protection

Indicates compliance with current European standards for Chemical Protective Clothing

BIZTEX is a trademark of Portwest.

Portwest's SMS is an integrated three layer polypropylene construction with anti-static properties. Formed by layering spunbond, meltblown and spunbond the fabric is strong and durable as well as being soft and breathable. The high tensile strength offered by this trilaminate fabric protects the wearer from fluid and particulate penetration without compromising on mobility or comfort. Portwest have several garments manufactured with SMS in the BizTex range.

- SPUNBOND

Portwest's BizTex Micro fabric is a polypropylene substrate with antistatic properties to which a polyethylene film is applied (PP/PE). The outer layer prevents the passage of liquid molecules inwards, yet allows the vapor molecules that build up on the inside of the fabric to permeate. This technology keeps the wearer fresh and comfortable.

PREMIER PPE PROTECTION

Portwest's PPE range complies with the latest standards, offering the highest level of protection. Designed with comfort in mind, this range of lightweight PPE ensures a pleasant wear even after long hours of use. Your safety is our mission.

HEAD PROTECTION 380

Portwest's head protection range aims to benefit our customers by combining the most up to date styles and standards in head protection, irrespective of job or location. Innovative, comfortable and lightweight hard hats available for multiple uses.

EYE PROTECTION 388

Portwest's eye protection range includes spectacles, safety goggles and visors, designed to protect the eyes and face of workers from injury during work activities.

HEARING PROTECTION 396

Portwest's hearing protection range includes PPE with different level sound attenuation, to be adapted to various working environments giving the correct protection from dangerous noise, without isolating the workers. This range of earmuffs offers a variety of models and colors allowing a personalized choice.

RESPIRATORY PROTECTION 400

Our Biztex™ brand ensures exceptional quality and performance across our full range of disposable masks. The extensive Biztex™ range offers a high level of protection and quality safeguarding the wearer against many workplace risks. Certified to both NIOSH and EN 149 standards.

LUGGAGE 402

KNEE PROTECTION 404

LIGHTS 406

HEAD PROTECTION

Portwest head protection, designed to the latest standards delivers the highest level of protection. Practical and lightweight, this range will ensure a comfortable wear even for long periods of use, irrespective of job or location.

ANSI/ISEA Z89.1 American National Standard for Industrial Head Protection

The Occupational Safety and Health Administration (OSHA) guidelines state that employees shall wear protective hard hats when working in areas where there is a potential for injury to the head from falling objects. Protective hard hats designed to reduce electrical shock hazard shall be

worn by each employee when near exposed electrical conductors which could contact the head. The performance criteria for head protection is provided in the American National Standards Institute (ANSI) Z89.1 standard for Industrial Head Protection, updated in 2014.

Hard hats classification and markings based on ANSI Z89.1

Classification	Marking	Definitions
IMPACT TYPE	TYPE I	TYPE I Hard hats designed to reduce the force of impact resulting from a blow only to the top of the head
	TYPE II	TYPE II Hard hats designed to reduce the force of impact resulting from a blow to the top or sides of the head
ELECTRICAL CLASS	Class G (General)	Class G Hard hats designed to reduce the danger of contact with low-voltage conductors. Tested at 2,200 volts
	Class E (Electrical)	Class E Designed to reduce the danger of contact with conductors at higher voltage levels. Tested at 20,000 volts
	Class C (Conductive)	Class C Hard Hats intended to provide no protection against contact with electrical hazards
OPTIONAL REQUIREMENTS	Reverse Donning	Hard hats which can be worn frontward or backward. They pass all hard hat testing requirements, whether worn frontward or backward
	Lower Temperature	LT Hard hats meet all testing requirements of the standard when preconditioned at a temperature of -22°F (-30°C)
	High Visibility	HV Indicate that the hard hat meets all testing requirements of the standard for high visibility colors. This includes tests for chromaticity and luminescence
	Higher Temperature	HT Hard hats meet the performance criteria after being preconditioned to higher temperatures of 140°F (60°C)

EN 397: 2012 European Standard for Industrial Safety Helmets

Mandatory tests:

- **Impact:** Energy spread to the head form must not exceed 5 kN after the fall of an object of 5 kg at 1ft high.
- **Penetration:** The tip of the test mass used (3 kg from 3.2ft

height) must not come into contact with the skull.

• **Flammability:** The hard hat is exposed to a flame and it must not burn with flame emission more than 5 seconds after removal of the flame.

Impact and penetration tests are performed at room temperature, +122°F and at 14°F.

Optional tests:

• Resistance at extreme temperatures:

Testing impact and penetration are performed at 302°F, -4°F, -22°F temperatures.

• Electrical properties:

Protects against a short accidental contact with electric leads under voltage up to 440 V.

PEAKVIEW™

TRANSLUCENT HARD HAT

The Peak View hard hat is a Portwest exclusive design and patented model. The translucent shell and see through peak and sides allow the wearer to look upwards without the need to tilt the head. The extra strong yet ultra light weight polycarbonate shell offers UV ray protection. Peakview is the safest and most comfortable solution for your head protection.

PEAKVIEW is a trademark of Portwest.

HEARING PROTECTION

Portwest's hearing protection range includes PPE with different level sound attenuation, to be adapted to various working environments giving the correct protection from dangerous noise, without isolating the workers. This range of earmuffs offers a variety of models and colors allowing a personalized choice.

USA STANDARDS

ANSI (US American National Standards Institute)

S3.19 - 1974

This standard specifies the test method for determining the level of noise attenuation (NRR Noise Reduction Rating) of the hearing protection, as recommended by the EPA (U.S. Environmental Protection Agency) and in accordance with the Occupational Safety and Health Administration (OSHA).

Noise Reduction Rating (NRR)

This is a unit of measurement used to determine the effectiveness of hearing protection devices to decrease sound exposure within a given working environment, classified by their potential to reduce noise in decibels (dB).

Excessive noise is generally defined as exposure to 85 or more decibels of sound over an 8 hour period. According to OSHA, hearing protection is required for all employees at this degree of exposure. In all cases where the sound levels exceed the values shown below, a continuing, effective hearing conservation program should be implemented. Example: if a worker is exposed to 100dB in a 2 hour period, he is also required to wear hearing protection.

OSHA'S Permissible Noise Exposures

Duration per day, hours	Sound level dBA slow response
8	90
6	92
4	95
2	100
1	105
0.5	110
<0.25	115

EUROPEAN STANDARDS

EN 352-1: 2020 Hearing Protectors - Ear Muffs

EN 352-2: 2020 Hearing Protectors - Ear Plugs

EN 352-3: 2020 Hearing Protectors - Hard Hat Mounted Ear Muffs

EN 352-4: 2020 Hearing Protectors - Level Dependent Ear Muffs

EN 352-8: 2020 Earmuffs with Entertainment Radio

All these standards establish requirements with regards to the manufacture, design, performances and test methods.

SNR (Single Number Rating): Single average value of attenuation

HML: Attenuation values expressed in terms of average levels of frequencies

H: Attenuation of PPE at high frequencies (pitched noises)

M: Attenuation of PPE at medium frequencies

L: Attenuation of PPE at low frequencies (bass sounds)

RESPIRATORY

Our Biztex™ brand ensures exceptional quality and performance across our full range of disposable masks. The extensive Biztex™ range offers a high level of protection and quality safeguarding the wearer against many workplace risks including liquid chemicals, static electricity, dry particles and radioactive contamination.

BIZTEX is a trademark of Portwest.

P201

NIOSH Standard:

42 CFR Part 84 classifies particulate respirators into nine different classes broken down into three levels of filter efficiency (95, 99 and 99.97%) and three categories of filter degradation (N, R and P). The selection of N-, R- and P-series filters depends on the presence or absence of oil particles. If no oil particles are present then any series filters (N-, R- or P-series) may be used. If oil particles are present then either R- or P-series filters may be used. If oil particles are present and the filter is to be used for more than one work shift, then only a P-series filter may be used. N-series filters cannot be used if oil particles are present.

The table below summarizes the difference between the NIOSH 42 CFR Part 84 and CE EN 149:2001 + A1:2009 standards.

Standard	Classification of the Filters	Efficiency Level	Breathing Resistance (Inhalation)	Total Inward Leakage	Categories of Resistance
NIOSH 42CFR-84	N95/R95/P95	95%	85L/Min 3,42 mbar	Not tested	N Series - Used in particulate environments free of oil aerosols
	N99/R99/P99	99%			R Series - Used for oil & non-oily particles aerosol (with time use limitations specified by NIOSH)
	N100/R100/P100	99.97%			P Series - Used for oil & non-oily particles aerosol (with time use limitations specified by manufacturer)
EN149:2001 + A1:2009	FFP1	>80%	95L/Min	P1 = 78%	All masks can be used against oil & non-oily particulate aerosols
	FFP2	>94%	FFP1: 2,1 mbar FFP2: 2,4 mbar FFP3: 3,0 mbar	P2 = 92%	
	FFP3	>99%		P3 = 98%

COLOR GUIDE

KINGSMILL | MASTER SHADES

100% COTTON WORKWEAR | MASTER SHADES

T-SHIRTS/POLOS | MASTER SHADES

Pantone references are for color guidance only and fabrics may not be an exact match in all cases.

KEY SYMBOLS

Stretch panelling

This symbol indicates the garment has stretch panelling in key movement areas for greater flexibility.

CE certified

This symbol indicates conformity of essential health and safety requirements as set out in European Directives.

UKCA marked

This symbol indicates UKCA marking in progress at time of print. All products placed on the UK market from January 2023 must be UKCA marked.

Cell phone pocket

This symbol indicates that a cell phone pocket is included in the garments which carry this symbol.

Print access

This symbol indicates that garments have print/embroidery access.

Interactive garment

This symbol indicates zip-in fleece or vest feature to create a one-piece garment.

Two-way zipper

This symbol indicates that the zipper can be opened from the top or bottom of the garment.

Reversible garment

This symbol indicates that garments are reversible.

Breathable garment

This symbol indicates that the garment is made of a high performance breathable fabric.

Half elasticated waist

This symbol indicates a half elastic waistband which allows for all-day comfort for the wearer.

Fully elasticated waistband

This symbol indicates a fully elasticated waistband on the pants which allows for all-day comfort for the wearer.

Knee pad pockets

Many of our products incorporate knee pad pockets. These garments have been developed to carry our range of ergonomically designed knee pads.

Sealed seams

This symbol indicates that the garment has sealed waterproof seams.

Welded waterproof seams

This symbol indicates that the garment has high-frequency welded waterproof seams.

Certified after 50x washes

This symbol indicates compliance with EN ISO 20471 after 50 washes*
*Minimum requirement under the EN norm is 5 washes

Dual ID holder

Dual ID holder allows use of both portrait and landscape ID card display

Anti-scratch design

Anti-scratch design with no exposed metal parts

Detachable lining

This symbol indicates that the garment has detachable lining.

Internal tablet pocket

This symbol indicates that an internal tablet pocket is included in the garments which carry this symbol.

Free spec cord

Free spec cord with styles showing this symbol.

Knitting Gauge

This symbol denotes the knitting gauge of the fabric.

Multiple storage pockets

This symbol indicates that the garment is designed with multiple pockets.

Anti-scratch

Surface coating intended to mitigate scratch effects on the lens

Anti-fog

Surface treatment which helps reduce fogging effects on the lens.

Lateral deformation

Optional test for safety hard hats, it indicates the resistance to lateral compressions.

Molten metal

Optional test for safety hard hats, it indicates the resistance to molten metals and hot solids projection.

RIS symbol

This symbol indicates that the garment meets the railroad industry standard for high visibility warning clothing.

FR tape

This symbol indicates that the garment has flame resistant reflective tape.

Heat applied reflective tape

This symbol indicates that the garment has heat applied reflective tape

Vending ready

This symbol indicates that this product has been individually packed for vending machines.

100% metal free

100% metal free

Ventilation ports

Ventilation ports for maximum breathability

Mic tabs

This symbol indicates that the garments have a mic tab for easy attachment of a radio.

Detachable hood

This symbol indicates that the garment comes with a detachable hood.

Hood

This symbol indicates that the garment comes with a non-detachable hood.

UPF 40+

40+ UPF rated fabric to block 98% of UV rays

UPF 35+

This symbol indicates the fabric has a UPF rating of 35+ so will block 97% of the UV rays which fall on the garment.

1 layer

This symbol indicates that the garment is unlined and is made using only the outer layer of fabric.

2 layer

This symbol indicates that the product has 2 layers - an outer and an inner layer.

3 layer

This symbol indicates that the garment has 3 layers - an outer, a mid and an inner layer.

Holster pockets

Swing away tool pockets

Touchscreen glove

This symbol indicates that this glove can be used with most cell phone touchscreen devices.

Heat applied flame resistant tape

This symbol indicates that the garment has heat applied flame resistant reflective tape

FR,IW

Indicates that the garment has double-stitched, industrial wash, flame resistant reflective tape.

WARNING

Cancer and reproductive harm www.p65warnings.ca.gov

PRODUCT FEATURES

NEW FEATURE
IMPROVED
 Indicates an improvement to the existing product.

5XL
 Indicates the size range of the product from smallest to largest size.

MADE FOR WOMEN
 This symbol indicates that the products have been designed for a women's fit with their safety in mind.

NEW COLOR
 Indicates that a new color/colors have been added to the style.

NEW
 New style
 This symbol indicates a new product has been added to the brochure.

3-IN-1
 Multi-seasonal Garment
 This symbol indicates the garment is multi-functional and can be worn different ways.

PLANET
 Portwest planet
 This symbol indicates eco conscious products made using certified recycled or sustainable fabrics or materials.

PET
 PET bottles used
 Indicates the number of PET bottles used, calculated using a 550ml bottle and based on a size L product.

INSULATED
 Insulated
 This symbol indicates the garment is padded to trap the heat and increase warmth

LINED
 Lined
 This symbol indicates the garment is lined for added warmth and comfort

MAX LOW TEMPS
 -33°F -1°F
 1HR 8HR
 Temp Range
 This symbol indicates the garment is tested for wear at the temperature indicated for the time period indicated.

ASTM F2732
 -31°F to 32°F
 Temp Range
 This symbol indicates the garment is tested to ASTM F2732 for wear at the temperature range indicated.

PRODUCT DETAIL SYMBOLS

Fabric
 This symbol indicates garment fabric details

Wadding
 This symbol indicates the garment wadding details

Z-Color
 This symbol indicates the very deep dye colors within that product range

Contrast Fabric
 This symbol indicates the garment contrast fabric details

X-Color
 This symbol indicates the standard colors within that product range

Upper
 This symbol indicates the material used in the upper of the product

Lining
 This symbol indicates the garment lining details

Y-Color
 This symbol indicates the deep dye colors within that product range

Sole
 This symbol indicates the material used in the sole of the product

PACK AND CARTON QUANTITY

Carton Quantity
 This symbol indicates the quantity of products in a carton which do not have inner boxes.

Garment Hanger
 This symbol indicates products are packed with a hanger and retail packaging for display in retail outlets. Ask the sales team for more information.

Retail Bag
 This symbol indicates that this packaging aids product presentation for retail sales. All other styles are packed in flat-pack plastic bags to keep items clean. All products have barcodes. Ask the sales team for more information.

Retail box
 Indicates that the item is shipped with a retail box to aid product presentation for retail sales.

Retail Tag
 This symbol indicates that this item is shipped with a retail tag to aid product presentation for retail sales.

Blister packed
 This symbol indicates that items are blister-packed for retail sales.

PACKING QUANTITIES

This indicates how many products are packed per box and carton. All of our products are normally sold one size and one color per carton.

200
10
Example 1
 UOS=1
 In this case the UOS = 1 piece

3000
500
100
Example 2
 UOS=3000
 In this case the outer carton quantity is the UOS and is color coded orange to show this. Ordering 1 unit = 3000 pieces.

x30
10
Example 3
 UOS=10
 In this case the inner box is the UOS and is colored orange to show this.

x6
x10
50
Example 4
 UOS=50
 In this case the inner box is the UOS and is colored orange to show this.

Packing Terms
 B = Inner Box
 C = Outer Carton
 P = Pallet

Unit of Sales (UOS)
 This is the minimum order quantity of a product. Unless indicated otherwise the UOS is normally one piece or one pair.

Examples of units of sale (UOS)
 1 = Singles = Garments, specialist gloves sold in singles
 2 = Pair = Footwear, most gloves
 B = Inner box = Disposable gloves
 C = Carton = Biztex, Disposable gloves

1
 1 = Singles

2
 2 = Pair

B
 B = Inner Box

100%
 C = Outer Carton

MERCHANDISING

CREATE A STRONG PRESENCE AND DRIVE SALES

Engage customers and drive sales with display units from our off the shelf suite of merchandising and point of sale products.

They are versatile, flexible, easy to use and can be fitted in any retail space. We will work with you to design and create the perfect retail space that enhances our brand and helps you sell more products.

INSPIRING SHOP IN SHOP DESIGN SOLUTIONS

Portwest has introduced a bespoke shop-in-shop design and installation service for premium retail spaces.

Our team of designers will work with you to create an impactful retail space that will elevate the brand and drive more sales.

PLANET

As a global company, Portwest are committed to minimizing the impact of our operations on the environment and the natural resources we consume, while ensuring a safe and equal workplace for our colleagues. Our sustainability strategy is underpinned by 4 strategic pillars: Environment, Labor and Human Rights, Sustainable Procurement and Ethics. We call this Portwest Planet.

1. ENVIRONMENT

We are dedicated to increasing the use of sustainable and recycled materials in product manufacturing, and this year we introduced eco-conscious product to our range.

We are certified to ISO 14001, meaning we have a fully integrated and proactive Environmental Management System. **85%** of all our garments carry the **OEKO-TEX® STANDARD 100 label**, and We achieved **Level 3 OEKO-TEX® STeP** certification, the highest level possible. We are continuously improving our packaging portfolio and are working towards eliminating single use plastic by 2025.

2. LABOR AND HUMAN RIGHTS

We aim to improve living standards and support the development of all Portwest employees. By 2023, we aim to have ISO 450001, the Occupational Health and Safety standard, across all our global sites. Portwest's fully owned factories are audited using the Sedex Members Ethical Trade Audit (SMETA). In Bangladesh, our factory is certified to the Gold WRAP standard.

3. SUSTAINABLE PROCUREMENT

We have built extensive supplier policies and embedded processes to ensure that production is both ethical and responsible. As a member of SEDEX, we are working hard to increase visibility of our global supply chain and are working closely with suppliers to ensure transparency and compliance with our supplier policies.

4. ETHICS

Portwest is committed to conducting and growing our business in a sustainable and ethical manner. We have stringent policies in place to ensure the health, wellbeing, and safety of all our employees worldwide, and ask for 100% engagement in corporate ethics and anti-corruption and bribery training. IT security is one of our top priorities, we are determined to protect business information for our suppliers, customers and staff. We follow the CIS20 set of best practice frameworks to achieve this.
